I Research outline

1 Introduction to the research

To fill the theoretical and empirical gaps in scientific knowledge on migration, the THEMIS project explores the conditions under which initial moves by pioneer migrants to Europe result in the formation of migration systems, when this does not happen, or migration systems are in decline. This is achieved through a substantially improved theorization of migration system dynamics by integrating theories on the initiation and continuation of migration; and a comparative, multi-sited, and longitudinal study of the evolution of heterogeneous migrant groups following different settlement trajectories from three origin countries (Brazil, Morocco and Ukraine) to eight European cities in the UK, Norway, the Netherlands and Portugal.

The THEMIS project began in January 2010 and is funded through to 2013 by the NORFACE Migration Research Programme. There are four project partners: the Department of Sociology of the Erasmus University Rotterdam (EUR), the Netherlands; the International Migration Institute (IMI) at the University of Oxford, UK; the International Peace Research Institute Oslo (PRIO), Norway; and the Institute of Geography and Spatial Planning, University of Lisbon (IGOT-UL), Portugal.

2 Research questions

The three main research questions of THEMIS are:

1. Under what conditions does initial (pioneer) migration establish precedents for the establishment of migration systems?

In other words, when does migration of pioneers lead to a system that generates more migration?

2. Which factors explain why many initial migration movements might be followed by limited chain migration of immediate family and friends but do *not* start processes of expanding network migration leading to network formation and the establishment of migration systems?

In some cases pioneer migration might lead to some migration of family members and close acquaintances but not to migration of others. We cannot speak of a migration system in such a case. What factors determine the start of a migration system?

3. Under what conditions do migrant networks and migration systems weaken or decline, or does 'spontaneous' (pioneer) migration to new destinations occur?

Migration systems can start, grow and stabilise, but they can also decline. How does such a decline come about? Does this have to do with the fact that people migrate elsewhere (new pioneers have migrated to new destinations and this had led to a system).

These questions are concerned with the conditions under which initial moves of pioneer migrants to Europe result in rapidly expanding network migration and the formation of migration systems, and the conditions under which this does not happen.

3 Central concepts

Migration system and migration system dynamics

By framing our research questions around the concept of migration systems, we take existing migration systems theory – with all its shortcomings – as our starting point. A fundamental aim of

THEMIS is to refine and reshape migration systems theory, which has hardly moved forward since Mabogunje's work in the 1970s. Mabogunje saw migration systems (1970) as a 'set of places linked by flows and counter flows of people, goods, services, and information, which tend to facilitate further exchange, including migration, between the places'. This definition remains quite open and general. It focuses on the ways in which systems run (either expanding or declining, or simply self-sustaining) and makes no claim to explain the genesis and decline of migration systems. Mabogunje's approach assumes that the system is already in place: it cannot explain why a system comes into being in the first place.

It is precisely such an existential question that THEMIS aims to address: under what conditions does the initial movement of pioneers result in an establishment of a migration system? Unfortunately, since Mabogunje, no systematic attempts have been made to further advance and refine migration systems theory drawing on later advances in general social theory. Migration systems theory remains unable to explain the **heterogeneity** of migration system formation (the existence of different trajectories), **change** (growth, decline, stagnation) within existing migration systems, or **the role of agency¹ (vis-à-vis structure)** in explaining such change. It is the ambition of THEMIS to address these gaps.

Migration systems are not steady phenomena, but flexible. Different migration flows develop, then change, and destinations and places of origin also change. In short, dynamics are at work within migration systems. We conceptualise migration system dynamics as *the ways in which the migration system changes in relation to: i) external (to the system) factors, which in turn re-shape the initial conditions under which migration takes place, ii) feedback mechanisms (within the system), and iii) the exercise of the agency of social actors within the system.*

These dynamics occur in different ways. Firstly, changes occur in relation to factors outside the system. One could think of climate change or a natural disaster that pushes people to move, but also an improvement in living conditions in the origin country. Secondly, feedback mechanisms encompass feedback that is given through the system, it can be both negative and positive. One can think of stories that encourage people to move to a certain place as apparently life is better there, or migrants may also communicate to non-migrants their discontent with their situation. Lastly, the agency of social actors refers to the capacity of people to act independently and to make their own free choices (within the system).

Pioneers

THEMIS address pioneer migrants in establishing precedents for further migration to follow (and the possible establishment of a migration system), and the conditions under which it would not happen. The question here is the role of the pioneer migrants in influencing who from the origin community, and to what extent, might follow their footsteps, and who would not?

Pioneers are not necessarily the first migrants who arrive in a certain country. Migration from A to B can be divided in different waves, for instance, Moroccan migration to the Netherland could be distinguished between labour migrants and family (reunification or formation) migrants. Pioneer labour migrants are interesting, but we also focus on the first female migrants who arrived after 1974 for family reunification. The term pioneer should not be understood too strictly.

¹ Agency refers to the capacity of individuals to act independently and to make their own free choices. Structure, by contrast, refers to the recurrent patterned arrangements which seem to influence or limit the choices and opportunities that individuals possess.

Migration threshold

A migration threshold is a hypothesised critical level beyond which migration becomes partly self-sustaining – in other words, it gains its own momentum. Today, this concept is rather unexplored. It is based on the idea that a ‘critical mass’ of migrants is needed to generate certain effects that create more migration. For example, the creation of associations, religious institutions, or special businesses that make the country in question a more attractive destination for migrants from a certain country. It is unclear whether such a threshold level really exists and it is one of the central aims of THEMIS to further theorise and investigate this matter.

Migration systems decline

The focus on migration dynamics in contemporary migration literature evolved around the assumption that once started, migrations would continue and self-perpetuate. New conditions arising in the course of migration would in turn make additional migration more likely. This implies theoretically limitless new flows, further growth and expansion ad infinitum. Clearly, this circular logic is a naïve assumption.

Studies of network migration usually ignore counterfactual cases in which initial moves by pioneer migrants do not set in motion self-reinforcing migration dynamics. A second weakness of these theories is their largely circular nature, according to which migration goes on forever. Little account is taken of factors that may weaken migration systems over time.

THEMIS pays special attention to the possible decline of migration systems or waves. People might stop offering help to new migrants, negative rumours could spread within the system discouraging people to move or the changing conditions on the labour market could influence a possible decline.

Factors

We also focus on macro-, meso- and micro-level indicators of structural conditions facing migrants. Examples of these are visualised in the following table.

Macro-level	Meso-level (partly affected by migration processes)	Micro-level
<i>Socio-economic indicators e.g.</i>	<i>Socio-economic indicators e.g.</i>	<i>Personal characteristics e.g.</i>
Income levels per head	Remittances	Household structure
Income stability	Community income inequality	Civil status
Employment levels	Socio-ethnic hierarchies	Gender
Labour market structure	Labour market segmentation	Age
Literacy / School enrolment	Economic growth	
Access to health care / health status of family members	Migration culture (migration-proneness)	<i>Micro-level socio-economic, e.g., Household income</i>
Access to social rights (social security)	<i>Political indicators, e.g.</i>	Ownership of land and other productive assets
<i>Political indicators e.g.</i>	Local implementation of migration policies	Ownership of residential property
Political freedoms and rights (voting, citizenship)	<i>Mobility indicators, e.g.</i>	Education and skills
Migration policies	Labour recruitment	Employment status

Macro-level	Meso-level (partly affected by migration processes)	Micro-level
Access to human rights	Access to migrant networks	<i>Socio-cultural</i>
Economic rights (property rights, shareholding)	‘Migration industry’: Travel agents, smugglers, document forgers, traffickers, etc.	Social status Ethnicity, religion
Conflict	Access to migration-relevant information	Social networks Access to information
<i>Demographic indicators</i> e.g. Dependency ratios Life expectancy Fertility Gender ratio	Labour demand in ‘ethnic’ niches <i>Environmental indicators</i> e.g. Agro-ecological risks (droughts, floods, etc) Land degradation	<i>Mobility indicators</i> Spatial distribution of family members Personal migration history Transnational activities
<i>Environmental indicators</i> , e.g. Climate		

Figure 1. Macro, meso and micro level indicators of structural conditions facing migrants

4 Target groups

The semi-structured interviews in the European research areas targeted people aged 18 or more born in Brazil, Morocco and Ukraine or with at least one of their parents born there, and living in the areas under study. In the areas of origin, the semi-structured interviews were conducted with return migrants and migrant’s family members (up to the third degree of kinship), with links to the Netherlands, Norway, Portugal or UK, and mainly born in their country of residence. The research team aimed for diverse target groups in terms of gender, age, social class, motive of migration, and duration of stay in the case of migrants in Europe.

Quantitative data in the European cities was collected among migrants aged 18 or more born in Brazil, Morocco and Ukraine or with at least one of their parents born there, and living in the areas under study. The surveys in the research areas in Brazil, Morocco and Ukraine were collected among people aged 18 or more and living in the surveyed households.

II Rationale for the selection of research areas

Within the three countries selected for the THEMIS project, individual regions were selected (two for Ukraine and Morocco, and three for Brazil). These were chosen to reflect at least one urban and one rural area from each country. Table 1 below sets out this categorisation.

	Morocco	Brazil	Ukraine
Rural	Nador	Mantena	Lviv oblast ²
Urban	Rabat	Governador Valadares, Campinas	Kiev

Table 1 - Research areas categorized as rural or urban

² Lviv city was excluded from the sample

These research areas were chosen according to a complex set of characteristics including migration history, socioeconomic development, and the professional expertise on migration issues of institutional partners in Ukraine, Morocco and Brazil.³

1 Ukraine

Ukraine's position in Europe made it vulnerable to the influence of multiple colonial powers. Western Ukraine was once part of the Polish-Lithuanian commonwealth (from the 15th century), Germany and the Austro-Hungarian Empire. The Eastern region remained under the influence of Tsarist Russia and subsequently after World War II, the whole country became a republic in the Soviet Union, until its eventual independence in 1991. These historical conditions have helped to shape the migration history of the country.

The Western regions of Ukraine were selected for this study due to evidence of high out migration to the 'West'. Traditional destinations for the settlement of the Ukrainian diaspora are predominantly the US and Canada (with 1 million and 400,000 people with Ukrainian ancestry respectively) and Poland (450,000 people). This dates back to the so-called 'first wave' of Ukrainian migration at the turn of the 20th Century. At this time, due to difficult economic conditions, many peasants left their villages in Western Ukraine in search of a better life elsewhere (echoing the migration-urbanisation movements of the industrial revolution in Europe).

Following independence in 1991, Western Ukrainians have tended to migrate to Italy (500,000), Spain (250,000), Czech Republic (150,000), and Portugal (75,000). These are not regional, but national statistics (at the level of Ukraine), however the general view is that these migrants primarily hail from the Western parts of Ukraine, with Ternopol, Lviv and Ivano-Frankovsk oblasts as the main migrant sending localities. In turn, the Eastern parts of Ukraine (i.e. to the East of Kiev) have much stronger links with Russia, as a result more than 2 million Ukrainian migrants now live and work in Russia (Markov, 2008).

Kiev, on the other hand, as the capital city, lies in the centre of Ukraine and has a much more diverse and complex migration history. As a big city it attracts migrants from other parts of Ukraine, as well as offering opportunities for people (professionals) who wish to look for employment abroad. As a result, by conducting the research in Kiev we wanted to capture the relatively recent (and small-scale) phenomenon of high-skilled emigration of Ukrainians. This was in contrast to the mainly skilled, and low-skilled workers leaving Western and Eastern areas of Ukraine and finding employment in construction, care, or domestic work.

Kiev was chosen as a metropolitan area for exactly the reasons outlined above. We were hoping that this choice would enable us to capture the existing (though perhaps on a small scale) diversity within the emigrant population from Ukraine. Kiev, being the capital city, has many more educational and economic opportunities (multinational companies, media outlets) that would provide the potential migrants with the opportunity to migrate – either via posted workers schemes, internships, scholarships and educational exchanges for students.

Lviv oblast was chosen as a largely rural area with documented high out-migration. As mentioned above, it is a traditional area of emigration, and the interviews in Phase 3 have confirmed this. People work mainly in agriculture or small businesses. Therefore migration presents itself as a viable alternative in times of economic and political uncertainty.

³ Cf. Appendix A for more information on socio-economic indicators in each research area.

2 Brazil

Three research areas were selected for Brazil, two located in the micro-region of Vale do Rio Doce, and a third located in the state of São Paulo.

The two areas of Governador Valadares and Mantena are both located in the micro-region of Vale do Rio Doce and have been heavily affected by emigration to the USA and Europe. The capital city of that region, Governador Valadares was selected as the urban area as it is the capital city of that region. The municipality of Mantena is chosen as a rural area and is located 135 kilometres to the East of the city of Governador Valadares and close to the border with the state of Espírito Santo.

The city of Governador Valadares has a history of emigration that dates back to the 1960s. The main destination then was North America, particularly the United States. Since the 1980s there has been a remarkable growth in the migratory outflows from the region, with the USA keeping its primacy as the main destination. More recently (after 2001), due to more strict controls at the American border on the one hand, and economic growth and labour market opportunities for foreign workers in other destinations on the other, countries like Portugal, the UK and Spain became significant destinations for migrants from the region (Siqueira, 2004; Siqueira, 2009; Fernandes, 2013). Portugal is a particularly attractive destination country due to language and cultural similarity, lack of visa requirements and a generalized perception of ineffective border controls. Portugal is often regarded as a gateway to Europe, with the UK (London in particular), Spain, the Netherlands and Germany being the target destinations (Pereira and Fonseca, 2012).

Mantena is also a sending area both to the USA and to European countries. It is a smaller area in size but of no less importance in terms of emigration to Europe. The patterns and evolution are similar to those observed in Governador Valadares. According to the 2010 population Census, the total resident population of the municipality reached 27,111 inhabitants.

Campinas is a major city in the state of São Paulo. It is a heavily industrialized region, with a population of more than 1 million people (2010 Census). In the late 19th and early 20th century, it attracted migrants from the poorer regions of Brazil to work in the coffee, cotton and sugarcane industries, and later on in the petrochemical sector, pharmaceuticals, telecommunications, and commerce and services sectors. Some internal migrants coming from other states decided to leave the country and look for better opportunities abroad. Despite being a receiving area for internal Brazilian migrants coming from all over the country and from the state of São Paulo, it is also a sending area to other countries like the USA, Japan, Portugal, and the UK, just to name a few (Baeninger *et al.*, 1992; Fusco, 2006). Emigration to European destinations developed especially when the corridor to the USA became tighter.

3 Morocco

Two regions were selected as research areas in Morocco: Rabat (Morocco's capital city) and Nador. The Rabat urban-conglomeration encompasses Rabat, Salé and Temara and is located in the broader region of Rabat. Nador was selected as a predominantly rural region, although it contains Nador city.

Comparing the features and conditions of the two regions demonstrates the reasons why they were selected for the THEMIS project. As mentioned above, Rabat is an urban area and Nador is mainly rural. In addition, Nador has a predominantly Berber population whereas Rabat is predominantly Arab. Languages spoken also differ between the two regions, with a greater proportion of people in Rabat speaking French. Nador was once colonized by the Spanish and is located near the Spanish

enclave of Melilla. Despite this, Nador can be described as much more economically and politically isolated than the cosmopolitan city of Rabat where the political power of Morocco is located.

The two regions also exhibit very different conditions as regards migration. Nador was chosen because it has a significant history of emigration and has specific migration links with Rotterdam. The fact that Nador was colonized by the Spanish could also have an impact on the profile of migrants from the region and the choice of destinations. Rabat, however, exhibits more diverse migration patterns. It is a destination for internal migrants from other areas in Morocco and a region of emigration to different parts of Europe and, to a lesser extent, North America. A factor specific to the profile of migrants from Rabat is that they are typically more highly educated than those leaving Nador and other regions of Morocco (where highly educated migrants are in a minority).

The Rabat urban conglomeration must be understood as a fairly heterogeneous area encompassing very wealthy areas as well as a number of slum areas located in the dormitory towns of Salé and Temara. In the 1980s, there was a severe drought in Morocco and agriculture suffered a great deal, with people whose livelihoods relied on agriculture migrating to neighbouring cities. This led to the creation of slum areas within cities like Salé and Temara. What follows is a little detail on the areas within Rabat, and the factors considered in the choice of neighbourhoods to be studied.

Salé is an ancient imperial city on the other side of the river from Rabat. It is a highly populated dormitory city, and the majority of its residents work and study in Rabat and come back at night. The two neighbourhoods in Salé considered in the study are predominantly slums (mixed with newly built apartments due to a policy to eradicate "habitat insalubre"). Temara is a new city created to absorb the demographic demands of Rabat. The selected neighborhoods in Temara are examples of middle class residential areas.

Within Rabat itself, the study divided neighbourhoods according to social class, looking at middle class as well as very wealthy areas. Those living in wealthy neighbourhoods live in luxury apartments and houses with a pronounced trend for a noticeably 'French' and globalized lifestyle. French and English are spoken and there are many global chain restaurants and shops. Another neighbourhood considered in the study was the richest residential area in the city. Residents in this neighbourhood live in very large villas. This area reflects Rabat as a centre of economic and political power as the population here hold prominent positions within administration and business. The neighbourhoods classified as middle class are adjacent to poorer areas in the city and are located in its centre, next to the major ministries, universities and hospitals. They are highly populated and crowded. The local population is highly heterogeneous; the local residents could be seen as the real economic actors and consumers of the city.

III Fieldwork report

1 Survey in the origin countries

In the second half of 2012, a second stage of the quantitative phase was begun, with surveys carried out in all the origin countries: Brazil, Morocco and the Ukraine. The survey instruments were developed collaboratively between all THEMIS partners, led by a specific sub-group (or task force). These surveys were developed carefully to both complement and build-on the earlier stages of THEMIS data collection, especially the questionnaire used in the destination country surveys. The same local research partners as involved in Phase 3 were contracted to undertake these surveys, with the addition of EUR team members carrying out some surveys themselves in one sampling location in Morocco to strengthen local capacity. This stage of Phase 4 data collection used a combination of geographic cluster sampling based on sampling frames, where available, coupled with a random walk sampling technique applied within selected localities of high out migration. The survey fieldwork in Brazil was continued into January 2013 before completion.

The final number of surveys collected per group and per country slightly differs in each country (cf. table 2).

Country	Research Area	Surveys	Total
Brazil	Governador Valadares	200	
	Mantena ⁴	40	
	Campinas	185	425
Morocco	Nador	203	
	Rabat	198	401
Ukraine	Kiev	210	
	Lviv Oblast	210	420
Total			1246

Table 2: Surveys in each country of origin and research area

Out of these 1,246 questionnaires, 1,239 have been totally completed, according to the information provided during the data entry phase.

Constraints related to elections in Ukraine and weather conditions in Brazil resulted in a different timing for the fieldwork in each country (cf. table 3):

Country	Research Area	Timing of the survey
Brazil	Governador Valadares	October 2012 - December 2012
	Mantena	October 2012 - December 2012
	Campinas	October 2012 - January 2013
Morocco	Nador	November 2012 - January 2013
	Rabat	November 2012 - January 2013
Ukraine	Kiev Oblast	September 2012 - October 2012
	Lviv	September 2012 - October 2012

Table 3: Timing of the survey in each research area

⁴ Due to financial constraints only 40 surveys could be conducted in Mantena.

2 Preparing the fieldwork: Recruitment and training of interviewers

In Governador Valadares/Mantena, interviewers were recruited among UNIVALE's students, both undergraduates and postgraduates. Advertising was made directly at the University. In Campinas, interviewers were recruited among Unicamp's students, both undergraduates and postgraduates. Advertising was made through the personal contacts of one team member from Campinas (Juliana Iorio). There was a high interest rate in both locations: around 40 persons in Campinas and 28 in Governador Valadares.

Following the training sessions, interviewers were selected on the basis of their experience, participation in the training and availability. In Campinas, 24 research assistants were initially selected and allocated one 'sector' (corresponding to 10 interviews) each. In Governador Valadares, 20 interviewers were selected. Of these, 16 were allocated one 'sector' and 4 were allocated two 'sectors' (16 sectors were located in Governador Valadares and 4 in Mantena).

In Ukraine, Overall 26 interviewers were recruited to conduct 420 interviews in two locations (Kyiv and Lviv region) under the supervision of two team leaders (one in each location). All of them had considerable experience in quantitative methods and regularly work as interviewers during surveys and polls. The key criterion, apart from the professional skills, was availability during the project period and ability to complete the fieldwork within the defined dates – before the start of the Parliamentary elections in Ukraine (which is usually a dead season for surveys). The interview guideline and two versions of the questionnaires (in Russian and Ukrainian) were properly tested during the two pilots.

In Morocco, the recruitment of interviewers was organized separately in Nador and Rabat.

In Nador, the EUR team recruited and trained the interviewers directly. The team consisted of 4 researchers who had also been involved in the phase 4 destination research. They were all Dutch-Moroccans. They had been recruited for phase 4a via free online job sites and through the university channels. The main criteria to select them were their higher education level experience, their affinity and experience with research and that their fluency in the language in which they were supposed to interview respondents. In addition they had to know enough English or Dutch. The 4 initial interviewers hired additional interviewers locally. This concerned for example a sister of one of the interviewers or good friends they could trust. The team of 4 trained and instructed the local additional interviewers. These also concerned (former) university students. The four initial interviewers acted as supervisors towards the three local interviewers. They teamed up in three groups of 2 or 3 persons. Each team always consisted of at least 1 'core' team member.

In Rabat, Dr Rachid Toutouh, Associate Professor and Head of the Social Sciences, Languages and Communication Department in the National School of Statistics and Applied Economic, coordinated the fieldwork and was able to recruit English-speaking students and some PhD-students to do the interviews in this English-speaking university school in Rabat. In total, he recruited 9 interviewers (students and PhD's of his University School of engineers) and did 28 interviews himself. All interviewers spoke English and Arabic, some also spoke Berber. They were recruited based on their background on survey studies; all of them studied and did some training in techniques of survey and sampling. One member of the Rotterdam research group (Erik Snel) went to Rabat for five days to train the local interviewers and to supervise their first interviews. The training lasted a whole day to discuss the research project and the questionnaire. All interviewers tried out the questionnaire on each other. After that we had a concluding round of questions and discussions. Before leaving Rabat, about 30 interviews were checked.

3 Sampling methods

The planned sampling method was a multi-stage stratified sampling with random route and random selection of one person living in the household (more details in section IV and in Appendix B). In practice, in Nador and Campinas, the random sampling was combined with snowball sampling.

In the case of Brazil, in Campinas the application of the rules defined within the random route methods was difficult in five of the upper-class and central neighbourhoods, where access to the actual residents was mediated by the doorman/woman. In these cases, they acted as gatekeepers and it turned out impossible to reach the residents through the application of strict random route rules. In these five sectors (1442, 323, 300, 100, 551), random route guidelines had to be abandoned and replaced with snowballing within each sector as well as use of personal contacts. This only happened after several attempts had been made to gain access to the residents, namely through letters addressed to the management of the buildings or after trying to contact them directly by telephone.

In Morocco, one of the most recurrent difficulties was the unavailability of some interviewers and the refusal to answer some questions. The unavailability of respondents caused some changes to the planned sampling methods and the use of snowball sampling in Nador. This only happened in a few cases which were not recorded.

The random selection of respondent was adapted to the cultural context of each country.

In Morocco, researchers could not use the last birthday method as Moroccans do not celebrate this date and therefore usually do not know their birthday. Interviewers were therefore instructed to randomly select a person within a household using the alphabet, asking whose name starts with a, then b, and so on, each time starting with a different letter. In a household of two this could be however too time-consuming. In some cases involving two person households they therefore resorted to just interviewing the person who opened the door.

Also in Ukraine, some respondents were not randomly selected. This was due to the intention of the researchers to increase the proportion of respondents with a migration experience in order to have enough cases to make some comparative analyses with respondents without migration experience. Therefore, researchers asked to randomly sampled respondents whether they had acquaintances (not relatives) with migration experience. This resulted in a sample of 420 respondents, 400 of which were selected randomly and 20 using snowball methods. This 20 cases sub-sample has been coded under the cluster numbers 100 and 200. They should be discarded from any analysis intended to be representative of the whole target population.

4 Fieldwork

4.1 Language and translation issues

The questionnaire initially designed in English was translated into Classical Arabic, Portuguese, Russian and Ukrainian.

In the case of Morocco, whereas in Rabat the interviewers only carried out the interviews in Arabic, in Nador many interviews were conducted in Berber. The interviewers in Nador translated directly using the Arabic or English language questionnaires. For some key words such as “move” or “migration”, they agreed before the fieldwork on which words to use in Berber in order to keep some consistency.

Some caution is recommended when analysing the results of questions c1b and f2c in the Rabat region. There was some confusion about the translation of the word “corruption” into Arabic. The interviewers in Rabat associated the Arabic translation with prostitution, and therefore used a different term. The interviewers in Nador did not have this association. However, some respondents were hesitant answering questions related to corruption. This is due to the fact that corruption and trust in the government are very sensitive topics in Morocco.

No other language and translation issues were detected during the fieldwork in the three countries.

4.2 Data collection

In Brazil, the survey could be conducted without any permit from the local authorities but carrying the fieldwork in some neighbourhoods was problematic. In Governador Valadares, in some sectors, the available maps did not correspond to the reality and had to be redesigned. In four sectors located in peripheral neighbourhoods with high levels of criminality, contact was made with local leaders to ensure a secure access to their residents (sectors: 122, 157, 154, 233). Issues surrounding insecurity generally related to drug trafficking and consumption had to be dealt with in some of the neighbourhoods (sectors 233, 170, 154, 157, 037, 177, 082). In middle-class and upper-middle class neighbourhoods the refusal rates were higher as well as difficulties in accessing respondents and some impatience was registered during the interview (particularly in sectors: 057, 033, 027, 002).

In Mantena, sector 023 located in a rural area was difficult to access because of the raining season and therefore fieldwork had to be delayed until the weather allowed interviewer's access.

To inform the local population about the research, UNIVALE advertised it in a local radio particularly popular in peripheral neighbourhoods. However, in both locations, some suspicious arouse in some sectors when residents heard that the research was about migration, namely because they feared that their participation could harm family members that had migrated (sectors: 001, 059).

In Campinas, fieldwork was delayed due to local elections and holidays and also some heavy raining periods and hot weather. The most salient difficulty was the application of the random route method in some of the upper/upper-middle class and central neighbourhoods as explained above. Even with the use of snowballing and social networks within each sector, in some of them the interviewers were unable to complete the 10 interviews in due time -sectors 1442 (5), 323 (1), 300 (7), 100 (2). Additionally, in four other sectors interviewers were also unable to complete the 10 interviews - sectors 24 (4), 1034 (3), 888 (4), 683 (6). In favelas despite some restrictions, such as the impossibility of working after dark or having to avoid areas where drug trafficking takes place, the application of the questionnaire was carried out without many problems and the response of the residents was good.

In one of the sectors (1477) the selected interviewer failed to perform his tasks and therefore the sector was excluded from the analysis. Two other interviewers dropped out and had to be replaced by others who had already completed their respective sectors. The easiest neighbourhoods were those of lower-middle-class residents located in the periphery of the city. Because of this differentiated access to the different neighbourhoods some overrepresentation of lower-middle-class may have occurred.

In Morocco, the researchers struggled to get the necessary permissions to carry out the fieldwork in Nador. In Rabat, this was all well organized by the local fieldwork coordinator. Dr Rachid Touhtou played a crucial role in getting the permission in both research areas; he travelled by himself to get the permission for the Nador team. He could get it directly from the Cabinet of the Minister of Interior.

The random route sampling was sometimes difficult to apply. The maps given to the interviewers did not always correspond to the local reality. The interviewers also encountered some areas with many empty houses which made the fieldwork more difficult. In other cases the areas selected were commercial areas with a lot of stores but with little private households. In a few cases interviewers opted to leave some neighbourhoods due to the difficulties of finding respondents because of there were not enough doorbells of private households to ring. In such cases they moved to the ‘reserve’ areas previously selected for them.

In Nador, it was sometimes difficult to remain in the 10 neighbourhoods that were initially selected due to the unavailability or the refusal of respondents. In a few cases it was not possible to apply selection methods within the household. No record has been kept on which respondents were not selected randomly.

In Rabat, the interview team did not manage to collect 10 interviews per assigned research location. In total, we received interviews from 9 neighbourhoods. In two of them, we had significantly less than 10 interviews; in two other areas we had significantly more than 10. Reasons were also the unavailability of interviewers or the refusal to conduct the interview despite repetitive attempts.

In Nador, the interviews were mostly held outside on the doorstep. In a few cases the interviewers were invited in. In such cases, interviewers felt obliged to drink tea and socialise which made the interview last very long. It was therefore the interviewer’s preference to do it outside (except with rainy weather). In some neighbourhoods they were invited in more often than in others. Also in Rabat, the interviews lasted longer than in Nador. The interviewers were surprised that so many people were willing to participate. They were mostly invited inside to conduct the interview.

Regarding the questionnaire, the research team in Morocco noticed that despite the instructions given to interviewers to comfort people and ask follow up questions on the question about which countries respondents think about when they hear Western Europe, one of the interviewers too easily accepted respondent’s initial answer that they did not know.

Some respondents in Nador asked the researchers to speed up the interviews. This was not the case in Rabat.

In Ukraine, no permits from the local authorities were needed to carry out the interviews. Regarding the availability of respondents, no interviews were stopped mid-way. There was only one case where although the respondent did not refuse to participate right away, communication turned to be very unpleasant. This was especially the case with some questions regarding income issues. As in previous researches in Kiev, the presence of intercom to access to the buildings is a widespread problem, particularly in the central part of the urban area. The interviewers were provided with ID and a letter on behalf of the institution conducting the survey in order to present themselves and they used different ways of getting in despite the intercom (1)waiting until someone came in or went out, or (2) getting in touch with people directly through the intercom. It also helped that the time spent during the interview was rewarded with a small gift –either with sweets, which worked better in the cities, or with a small amount of money given as time reimbursement, which was preferred in the rural areas.

Besides the income-related questions, no other considerable problems were detected with the questionnaire during the fieldwork as most issues were addressed and amended during the two pilots. When giving answer to some questions with reference to counties (such as countries belonging to Western Europe), some respondent were ready to name more countries than was allowed to input during the data entry process. In other questions with reference to the ‘country of

'residence' and the 'most recent countries of residence', respondents were sometimes not sure which the most recent one was. As a result, 'most recent' option may sometimes have been missed.

Once the fieldwork had already started, it was decided to include a new category in the relation codes of the code sheet. 511 (men) and 512 (women) were added to differentiate those acquaintances specially close to the respondents such as best men, maid of honours, god fathers, or god mothers. This category has been used only in a few cases.

4.3 Bias

In Morocco, researchers interviewed more men than women in both regions. It is difficult to say whether this is really a misrepresentation or not. Men are probably more willing to participate in research than women in Morocco due to the local gender relations. Women in Morocco may not have been allowed to participate or they may have thought they were not allowed. We anticipated this and have therefore worked with female interviewers so that women could be interviewed by women, but this has not lead to a completely even distribution in terms of gender.

In Rabat, young people seem overrepresented. Looking at the population statistics for that city this may however not be a problem. Morocco inhabits relatively many young people, and Rabat even more considering that this is a city where many students live.

IV General guidelines to conduct the survey

In this section we include the main instructions provided to the interviewers to conduct the survey.

1 Target population

Surveys will be conducted with respondents that meet the criteria of our target population:

- Randomly selected members of Moroccan household who are currently 18 years old or older;
- Households do not include hospitals, nursing homes, military bases etc;
- People have to live in the households, so this excludes people who are temporarily visiting or staying there;
- People who are mentally able to understand our questions
- To be born in the country of research is not an eligibility criteria.

2 Sampling methods

- For this phase, the researchers used a multi-stage stratified sampling with random route and random selection of one person living in the household. In the case of the research areas in Brazil and in Ukraine, it was a probability-proportional to size sampling. This was not the case in Morocco.
- The strata used corresponded to the 7 research areas selected for this phase (2 in Morocco and Ukraine and 3 in Brazil).
- The first stage is the random selection of primary sampling units (e.g. neighbourhoods or other territorial units) where random routes took place differed in each country according to the data available.
- In the case of Morocco, the selection of clusters was based on cells of a grid drawn on a map in the case of Rabat and Nador. In Ukraine (Kiev and Lviv) the clusters corresponded to election districts selected from a full list using the probability-proportional-to size procedure. This

methodology is in line with the one that was used in the FP7 EUMAGINE project⁵. In Brazil, the researchers used census tracts as primary sampling units.

- The team supervisors selected the household on a fixed random walk within a fixed starting point and in a next step the interviewers used a systematic key for selecting household members. In Ukraine the household member was selected according the first-birthday method. In Morocco and Brazil, he/she was selected according to the household members' names alphabetical order.
- More details on the sampling strategy for each country are provided in Appendix B.

3 No answers/refusals/non-response

The interviewers were asked to fill in a non-response form with the following instructions:

When you approach someone for an interview, there are four possibilities: a) the person to be selected is at home and agrees to do the interview (you can do the interview); b) the person to be selected is not at home, you have to come back to approach this person; c) there is no one at home, you have to come back at least once at another moment of the day to contact the selected person (if the first approach is in the morning or the afternoon, come back in the evening and vice versa); d) the person to be selected is available but refuses an interview.

Both an **explicit refusal** and **two attempts in vain** count as a non-response. In that case, the address can be booked as a non-response. Use the supplied non-response form for tracking your attempts.

Starting point (neighbourhood code):			
House ID (house number, name person, characteristic, etc.):			
	Date	Time	Remark
Attempt 1			
Attempt 2			Respondent not at home/not available ()
			Respondent refuses interview ()
Interview conducted?	Yes / No Reason for refusal:		

If a person is recorded as a 'no answer' or the selected person refuses to answer possible alternatives may be found as follows (in this order until succeeding in obtaining an interview):

- Go to the house on the right hand side of the first selection
- Go to the house on the left hand side of the first selection
- Go to the next house right or left from the first selected house

⁵ Cf. Ersanilli, E. et al, (2011) "Methodology for quantitative data collection" Project Paper 6A EUMAGINE Project.

<http://www.eumagine.org/outputs/PP6A%20Methodology%20for%20quantitative%20data%20collection%20-%20Final%20version.pdf>

The goal is to do 10 interviews (not more!) within the assigned research location. In order to keep the random selection of respondents, you are **not allowed to do more than 20 attempts** to approach a respondent per walk. However, non-response (that is explicit refusals and not finding people at home twice) are not included in this number of 20 attempts. For each non-response, you can do another attempt to contact a respondent.

This number of maximally 20 attempts to approach a respondent also goes for the suburban and rural research locations. After 20 attempts (again, non-response not included) you have to stop approaching new respondents in this location and first have to come back to approach people who were not available at another moment of the day.

In that case, you can proceed your work in another selected research location

Keep track of the non-response and the response on the map of the neighbourhood in which you are working. Indicate on the map with a pen how you have walked and mark the places where you rang the door. Give these marks on the map a number (indicate the numbers on the map as well) and use this same number on the non-response forms so that they correspond.

4 The questionnaire

The questionnaire is divided in 10 sections of questions, each corresponding to one letter and one main theme. In each section there is a variable number of questions. There is an additional section (K) that should be filled in by you after completing the interview. The sequence of the questions followed during the interview must be the one in the questionnaire. Questions need to be asked exactly as they are written. If additional explanation is necessary interviewers should provide it after posing the question (or after repeating it, if necessary). All questions must be answered. If the respondent does not provide an answer one of the Non-Response codes must be used by the interviewer:

- **777** Not applicable
- **888** Don't know
- **999** Refuse to answer

777: Not applicable should be used: when the question, for some reason, is not relevant to the respondent given his or her situation. Use the existing answer categories whenever possible.

4.1 Format

The use of fonts throughout the questionnaire has been designed to guide the interviewer:

Text in bold should be read aloud by the interviewer

Underlined text should be read with emphasis

Text in grey should not be read aloud by the interviewer

Text in italics contains instructions for the interviewer

→ Shows routing to specific questions depending on answers

4.2 Introductions

Each section has an introductory text that should be read to the respondent to explain the kind of questions that will be asked. This should be done in a natural manner and you may adapt it to suit

the flow of the interview. The introduction to the questionnaire is important to answer doubts that the respondent may have and to get his/her permission to respond to the questionnaire.

4.3 Instructions for interviewers

In the questionnaire, some questions have instructions for interviewers in *italic*. You will need to be aware of these instructions to be able to apply the questionnaire correctly. These instructions are there mostly to clarify doubts while conducting the interview and to stress the kind of answer we are looking for in each question. In some cases the interviewer is requested to ask ‘follow-up questions’. These are questions that are related to the issue being discussed and that are relevant for the kind of answer we are looking for. In addition to these short instructions there are other, lengthier, that will be provided separately and are intended to guide you throughout the application of the questionnaire. Before we move on to these additional instructions to specific sections or questions, we would like to provide some thematic overall instructions:

Codes

Throughout the questionnaire, interviewers will be asked to fill in different kinds of codes: country codes, activity codes, relation codes and location codes.

Country Codes

Country names mentioned by the respondent have to be written down during the interview and country codes looked up and registered after the interview. Countries that participate in the project appear in the beginning; all other countries are listed in alphabetic order (using the English version of country names). For interviews conducted in Ukraine please note that the country codes also include former USSR as well as Warsaw pact countries; these appear after the list of partner countries. Throughout the questionnaire there are also instructions for interviewers regarding the use of such codes.

Activity Codes

Activity codes should be found and registered during the interview whenever possible. The precise name of the activity must be written down in all cases. If the respondent has more than one activity, you will need to ask follow up questions to assess what was the ‘main’ activity. If the respondent has doubts, he/she should be asked about the one where he/she spent the most time on.

If the respondent has/had as his/her main activity: ‘Not working’, one of the codes 001 to 008 should be used. Follow-up questions may be necessary to assess the correct situation of the respondent.

If the respondent has/had as is main activity: ‘work’, one of the codes 101 to 904 should be used. Follow up questions may be necessary to identify the occupation of the respondent.

In this research, we understand ‘au pair’ as work (code 702).

The occupations are grouped in eight categories. In each category, several relevant occupations are listed. If you cannot find the relevant occupation, then code the last option in the relevant category (“other occupations” in this category). Interviewers should therefore try to understand in what occupational category the respondent’s main activity is to be placed. With some exceptions, the categories differ from each other because of the occupational level (required educational level). So we have:

- Higher-level professionals, managers, entrepreneurs (1)
- Associate professionals, lower management, and technicians (2)

- Routine clerical, sales and other non-manual workers (3)
- Manual foreman, supervisors (5)
- Skilled manual work, machine operators (not agriculture) (6)
- Semi-skilled and unskilled manual workers (not agriculture) (7)

Three occupational categories do not fit into this differentiation of occupational levels

- Small employers and independent workers (irrespective their educational level) (4)
- Agricultural workers (8)
- Informal survival strategies (all kinds of informal work arrangements) (9)

If the respondent's occupation is not listed, then find out in what main occupational category s/he belongs in.

Note that farmers should be coded in category 4 (402 'self-employed farmer') and not as agricultural worker (category 8). Additional questions may need to be added to clarify which situation suits the interviewee better.

Relation codes

Relation codes should be found and registered during the interview whenever possible. The precise kind of relation must be written down in all cases. Emphasize that we are not interested in the names of these persons but in what kind of persons are relevant for the respondent. We are both interested in the relationship between this person and the respondent and the gender of this person. When a male person is mentioned, the last digit is always 1. When a female person is mentioned, the last digit is always 2.

Location codes

Location codes should be found and registered during the interview whenever possible. The precise name of the location must be written down in all cases. The location codes refer to specific places or regions in the countries of origin. Codes referring to the research locations are more detailed than codes referring to other parts of the country.

If needed, interviewers may show the relevant map of the country in question to the respondent so that the correct location code is identified.

Questions that may need additional instructions

A: Background

A3 – The interviewer must pay attention to the different levels of detail in the codesheet: more detail is needed in the regions where we are conducting interviews than in other parts of the country.

B: Family

B1 – Refers to stable unions of couples that live together but not necessarily because one of them may have migrated and the relationship maintained. This situation needs to be clarified. We do not consider here relationships with boyfriend/girlfriend with whom the respondent has never lived. Follow-up questions may be needed.

B3 – In Morocco: if the person is not married, please ask this question with a special consideration.

B4 – The aim is to identify persons that live in the house, not necessarily family members.

C: General changes in the region

C2 – The respondent does not need to know them personally.

C4 – The respondent does not need to know them personally. This question does not require any specific details.

D: Migration history

D2 – Consider ‘3 months stay’ abroad in this question. The interviewer must take note of the last country of emigration and the year of migration because this information will be used in subsequent questions: [Year of immigration] and [country] or [country of destination]

E: Movements from network

E1 – For Ukraine explain: any country outside Ukraine.

E5 and E7 – Write down the name of the country followed by the respective code in brackets. For each person please ask whether they lived in one country or more countries. If one person resided in more than one country please start with the most recent one.

E7 - Ask the respondent to have one specific friend/ acquaintance in mind and say where s/he lives, then the next friend/ acquaintance and so on.

E6 – Consider 3 months stays abroad.

F: Transnational contacts and Western Europe

For Brazilian respondents – we should clarify this with the respondents and perhaps use a list of countries for Western Europe.

F1 – The interviewer may need to explain that this question aims at understanding which countries the respondent associates with Western Europe or that she/he thinks of when hearing ‘Western Europe’. It is about their perception, not a right or wrong question.

F7 – For Morocco: please add that the respondent is not obliged to answer if this is too sensitive.

H: Contact with returned migrants

This section refers ONLY to those migrants that returned to live again in their country of origin, not to those that return to visit.

I: Views on migration and its impact on the region

I2 – Explain that this refers to the existence of specific areas within the city that may be more related to migration, because people left from those areas, migrants built or bought houses there (eg: areas of new construction as a result of migration) or concentration of services associated with migration, and others.

I5 – We are talking about the effects of people LEAVING the region, emigrating.

J: Education and Work

J5 – Which other occupations does the respondent have? May be paid or unpaid, in the house (domestic work or looking after children) or outside.

J7 – If necessary explain that remittances received from abroad may be included in the sources of income.

V Data entry and data cleaning

During and after the data collection, interviewers entered the data using an intranet platform. The data cleaning phase was done collaboratively.

In Morocco most of the questionnaires were in Arabic, which is written from right to left -the categories of the questionnaire were in this order as well. The data entry program was in English with the categories ordered from left to right. This has caused some mistakes in entering the data, because the interviewers forgot to change the order of the categories. The errors have been corrected.

Some interviewers stated that it was sometimes difficult to enter the answers to question G, because they had to deal with persons with dual citizenships. Persons with dual citizenship are free to go to their destination country in Europe.

IMI performed consistency checks on the routing of the questions, unusual answers and missing values using STATA. In the case of the Moroccan questionnaires, the inconsistency checks on the paper questionnaires was conducted by the EUR team in Rotterdam where the paper questionnaires had been send by the local team in Nador and Rabat. In the cases of Brazil and Ukraine, the questionnaires remained archived at the local collaborating partners who implemented the checks. The list of inconsistencies was sent to the local teams to be checked on the paper questionnaires and corrections were centralised at IMI and entered in the database when the inconsistency was due to a data entry error.

The fieldwork finished earlier in Ukraine than in the other two countries. This allowed the Ukrainian team to make some preliminary checks before the main data cleaning. These checks were made based on a provisional SPSS file where variables were not labelled following the questionnaire logic. Consequently these first checks have been more tedious because of the constant checks the researcher had to make to match the questions with the labelling. This could have been avoided if the variables had been relabelled according to the questionnaire logic before starting any data cleaning.

The location codes used during the fieldwork were developed using two letters to code the country and two digits to code the region. For instance, the region “Pedra Azul” in Brazil was coded *BR30*. This could be problematic during the analysis phase because it produced string variables in the dataset instead of numeric ones. To avoid this issue, the location codes were changed into 4 digits during the data cleaning. For instance, in the above example of “Pedra Azul” the *BR30* was replaced by *1130*. The new codes are included in the codebook in the following section.

VI Weights

No weighting has been developed yet to compensate for the design effects. The variable “location” (strata) and “neighbourhood” (cluster) can be used to take into account the multiple stages of the stratified cluster sampling and the associated intragroup correlations.

VIII THEMIS Questionnaire - Phase 4B

The English original template of the questionnaire was translated in each origin country. Table 4 summarises the versions used in each country. The original English version is included below.

Country of survey	Language	Reference
Brazil	Portuguese	BR_POR
Morocco	English	MO_ENG
	Arabic	MO_ARA
Ukraine	Russian	UA_RUS
	Ukrainian	UA_UKR

Table 4: Versions of the questionnaire used in each destination country

Appendix A

Socio-economic indicators in each research area

Table 1 - Regional data⁶

	Lviv oblast ⁷	Kyiv ⁸	Rabat	Nador	Governador Valadares	Mantena	Campinas
Population	2,539,153 (Dec, 2013)	1,725,121 (Dec, 2013)	2,349,202	726,520	263,689	27,111	1,080,113
Birth rate (live births per 1000 population)	11.9 (2012)	12 (2013)	18.4	16.4	13.1	11.8	12.2
Percentage unemployed	7.4% (Jan-Sept 2013)	6.3% (Jan-Sept 2013)	12.8%	14.8%	5.6%	8.2%	6.5%
Surface area (km²)	21,833	838	9,580	3,263	2,432	685	794
population density (people per km²)	116.3	2059.1	245.2	222.7	112.6	39.6	1359.6

Table 2 - regional data continued

	Lviv oblast	Kyiv	Rabat ⁹	Nador ¹⁰	Governador Valadares ¹¹	Mantena ¹²	Campinas ¹³
Literacy	NA	NA	67.8%	52.7%	224,189 (85%)	21,618 (80%)	968,404 (90%)
HDI	NA	NA	0.63	0.68	0.73	0.68	0.81
Infant mortality rate (per thousand)	7.9 (2012)	NA	37	49.3	NA	NA	NA
GINI index	NA	NA	NA	NA	0.41 (2003 data)	0.44 (2003 data)	0.42 (2003 data)

⁶ Caution is advised in utilising this data to compare regions across countries as there may have been significant differences in the way that the statistics are calculated. The data within countries has been given on comparable measures. Caution is also advised as regards to date. Although the most up to date information has been used, some data has been taken from censuses, which for Morocco dates back to 2004. NA means the data was not available.

⁷ Lviv data is taken from the State Statistics Service of Ukraine <http://www.ukrstat.gov.ua/> and the Main Statistical Office in the Lviv region <http://lv.ukrstat.gov.ua/>

⁸ Kyiv data is taken from the State Statistics Service of Ukraine <http://www.ukrstat.gov.ua/> and the Department of Statistics in Kyiv region <http://oblstat.kiev.ukrstat.gov.ua/>

⁹ Rabat data is given for the Rabat region as a whole. Data is available for the individual areas within this (Rabat City, Sale, Temara). Data is taken from http://www.hcp.ma/downloads/Demographie-Caracteristiques-demographiques-et-socio-economiques-RGPH-2004_t13063.html, <http://www.cr-rszz.org/> and http://www.hcp.ma/Recensement-general-de-la-population-et-de-l-habitat-2004_a633.html or <http://www.hcp.ma/> (this is the 2004 census data).

Luciana de Farias	Campinas (State of São Paulo)
Lidiane Maciel	Campinas (State of São Paulo)
Thaís Lima	Campinas (State of São Paulo)
Ana Clara Galindo	Campinas (State of São Paulo)
Paulo Sacks	Campinas (State of São Paulo)

2. Selection of respondents

Target Population - Resident population, aged 18 or more, in two sending areas, previously selected for Phase 3: one in the state of Minas Gerais (Region of Vale do Rio Doce) and another in the State of São Paulo (city of Campinas).

In the micro-region of Vale do Rio Doce, two localities were selected:

- the city of Governador Valadares (the capital city) (Fig1),
- the municipality of Mantena (Fig. 2), a rural area located next to the border with the State of Espírito Santo. Both territories are deeply marked by emigration to the United States of America and Europe.

Number of questionnaires to be completed in each locality:

- Campinas: 240
- Governador Valadares: 200
- Mantena: 40

3. Sampling method

Sampling method: Probabilistic sampling method. Among the different methods available a cluster, multistage sampling was chosen.

Survey units:

- ***Sampling unit*** – the household
- ***The respondent unit*** - family member, aged 18 or more, selected to respond to the questionnaire

Step-by-step sampling plan:

Step 1 Update sampling frame

- The first step consisted of making a list of all the census tracts in each research locality (*distrito* of Campinas; *subdistrito* of Governador Valadares and *município* of Mantena) and collecting up-to-date information on the population size in each cluster (census tract) (Fig. 1, 2 and 3).
- Then, the census tracts with less than 100 dwellings were grouped.
- Afterwards, from the numbered list of census tracts (or group of census tracts) of each locality, the research team randomly selected a number of sampling units using a list of random numbers, which constituted the primary sampling units where the questionnaires were applied. Considering that the census tracts included in the sample were randomly selected and their homogeneity in terms of size, 10 questionnaires were made in each census tract. Therefore,

twenty primary sampling units were selected in Governador Valadares, 4 in Mantena and 24 in Campinas. Drawing extra primary sampling units to compensate for non-response rates was also taken into account.

Figure 1 – Census tracts of the city of Governador Valadares (State of Minas Gerais)

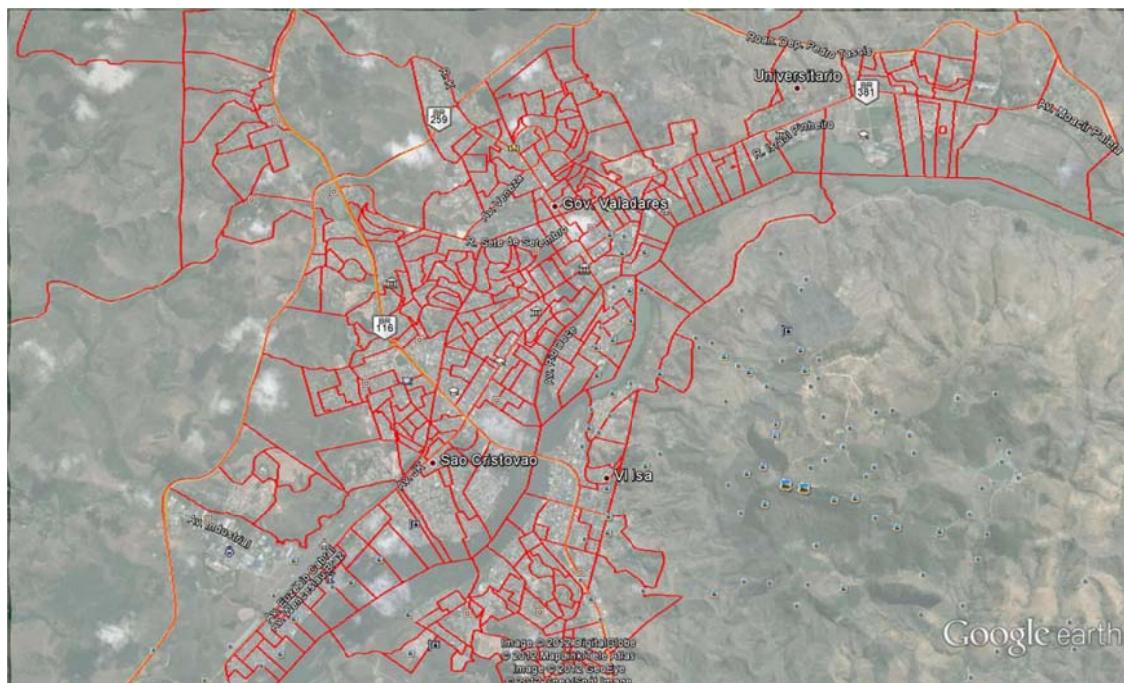

Figure 2- Census tracts of the municipality (município) of Mantena (State of Minas Gerais)

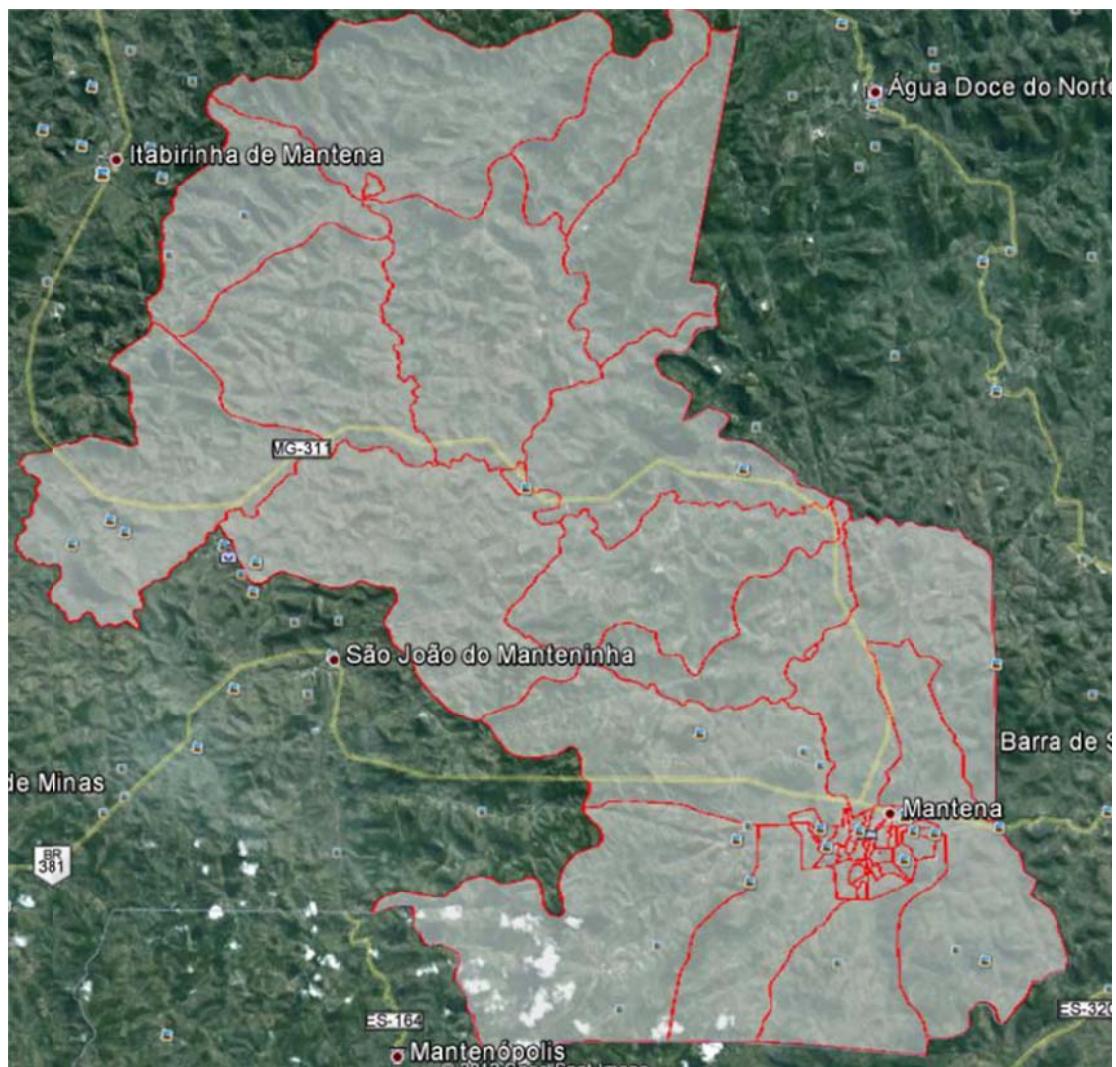

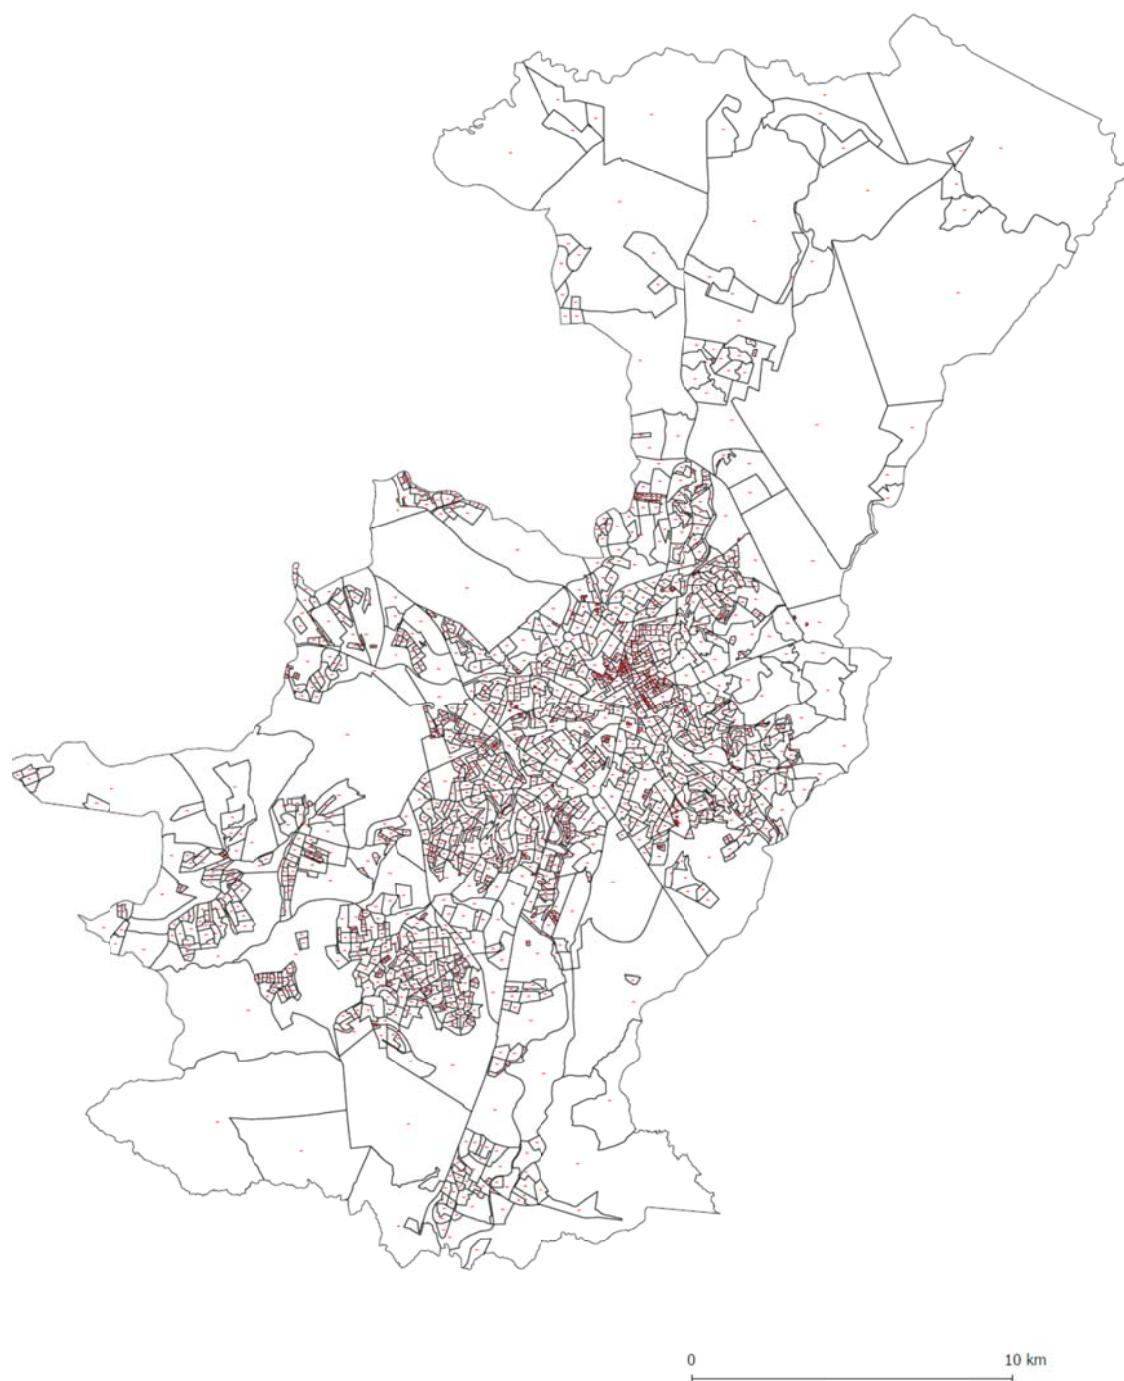

Fig 3- Census tracts of the city of Campinas (State of São Paulo)

4. Sampling clusters (census tracts) randomly selected in each research locality

Governador Valadares

In the numbered list of census tracts in the city of Governador Valadares, the team randomly selected 20 clusters (from a list of random numbers), which constituted the primary sampling units where the questionnaires were applied. As mentioned above each sampling unit would have a

possible maximum batch of 10 interviews. Therefore, 20 clusters were needed to complete 200 questionnaires (Table 1).

Table 1: Sampling clusters (census tracts) randomly selected in Governador Valadares

Geographic code of the randomly selected census tracts	Number of permanent private dwellings (2010)	Resident population in private buildings (2010)
312770105000002	241	689
312770105000009	197	529
312770105000027	228	585
312770105000033	423	1258
312770105000037	243	658
312770105000057	252	675
312770105000059	409	1288
312770105000114	292	969
312770105000122	99	323
312770105000170	255	862
312770105000177	303	1003
312770105000197	597	2028
312770105000208	289	891
312770105000209	231	739
312770105000233	265	976
312770105000307	112	322
312770105000340	359	1221
312770105000253	126	422
312770105000260	111	387
312770105000157	331	1170

Mantena

The municipality of Mantena has both a rural and urban population. Therefore, to obtain a more representative sample, stratification for rural-urban areas was also used. For this purpose, the research team calculated the share of rural and urban population in the municipality. The 40 interviews were divided across the two strata based on their relative size.

In Mantena, 78.3 per cent of the population is urban and 8.7 per cent is rural, then (.783*40=31,3; and .087*40=8.7). These numbers should be rounded to sets of 10. So, 30 interviews should be done in the urban area and 10 in the rural part of the municipality (Table 2).

Table 2: Calculation of the distribution of the questionnaires in rural and urban areas of the municipality of Mantena

Population	Number	%	Number of questionnaires to be conducted
Rural	5830	21.7	10
Urban	21053	78.3	30
Total	26883	100.0	40

The 3 census tracts where the 30 questionnaires of the urban area were made were randomly selected (using a table of random numbers) from a numbered list of all the urban census tracts in the

municipality of Mantena. The same procedure was followed to select one census tract in the rural area (Table 3).

Table 3: Selected census tracts to apply the questionnaires in Mantena

Geographic code of the census tracts	Number of permanent private dwellings (2010)	Resident population in private buildings (2010)
Urban area		
313960705000019	232	652

313960710000001	244	693
Rural area		
313960705000023	159	490

In Campinas 29 census tracts (24 needed to complete 240 questionnaires and 5 extra areas to compensate for eventual inability to reach, for security reasons, some of the selected areas) were randomly selected (Table 4).

Table 4 - Selected census tracts to apply the questionnaires in Campinas

350950205000542 (4th)	243	774
350950205000479 (5th)	150	523

5. Selection of the households

Step 2 – Selection of the households to be interviewed in each census tract

In each census tract the selection of dwellings was made using a probabilistic systematic sampling method.

Firstly, an inventory of all the addresses in each randomly selected census tract was made. That list was obtained by conducting intensive fieldwork. For this fieldwork each interviewer received a detailed map of the sector where he/she was going to conduct the survey with the information of the building where the numbering and the direction of the walk would begin. Thus, all the dwellings in every block and street of the census tract of each interviewer were counted.

The starting point of the walks to make the inventory of all the addresses, as well as the direction of the walk in each census tract was defined in advance by team supervisors, and not by the interviewers themselves, in order to make sure that all the dwellings were included in the inventory. For each census tract a Google-map based satellite and outline map segments were provided to interviewers where the starting address was marked. Interviewers were required to document their route on the map.

In each building, the numbering of the dwellings started in the lower floor and followed the ascendant order to the top floor (Figures 4 and 5).

Example:

Figure 4: Campinas – census tract 350950205000024

Starting point: crossroads of José de Alencar Street with Duque de Caxias Street

Walk to be followed: from the starting point go straight ahead Duque de Caxias Street – José Paulina Street – General Câmara Street (right side) – General Câmara Street (left side) - José Paulina Street - Aquidaban Avenue - José de Alencar Street – go straight ahead to the starting point.

Figure 5: Campinas: Census tract 350950205000342 – Favela do Jardim do Lago II

Starting point: crossroads of Engenheiro Márcio Duarte Ribeiro Avenue with Rubens Zimmermann Street.

In order to number the dwellings, very often one just has to look at the door bells. However, sometimes it is necessary to ask the concierge or a local resident how many dwellings there are in the building (Figure 6).

Figure 6: Doorbells (I)

If there is a caretaker or janitor who permanently lives in the building he/she should also be considered in the counting (Figure 7).

Figure 7: Doorbells (II)

One must be careful: sometimes there are dwellings behind a front shop. The interviewers had to check if there were dwellings or not. In the photo bellow there seems to be a dwelling behind the shop, but one needs to ask in order to be sure (Figure 8).

Figure 8: Dwelling behind a shop (Campinas)

After completing of the inventory of addresses it was necessary to calculate the sampling interval.

6. Sampling interval

Step 3 – Calculating the sampling interval (interval between the dwellings selected in each census tract considered for the fieldwork)

The team previously defined 10 questionnaires to be applied in each sector. In order to calculate the sampling interval, the total number of dwellings in the sector was divided by the number of dwellings to be interviewed which is 10. Because the number of dwellings in each sector was not the same, the sampling interval also varied.

In the example 1 (Table 5) bellow, there are 271 households. Therefore the sample interval is 27. In example 2, the sample interval is 19, and in the third example the sample interval is 15.

Table 5: Example:

Census tract	Number of dwellings	Interval between the dwellings
Example 1	271	271/10 = 27.1 (27)
Example 2	199	199/10 = 19.9 (19)
Example 3	152	152/10 = 15.2 (15)

7. Selection of households and respondents

Step 4 – selection of the households

Being a systematic sample, the households to be included in the sample were selected from the numbered list of all the addresses in each census tract (inventory) at every nth element in the list. For example, if a census tract contained 199 households and the sample interval was 19, the following elements of the list would be chosen:

- 1st questionnaire would be made in the address no. 1 of the list
- 2nd questionnaire would be made in the address no. 20 (1 + 19)
- 3rd questionnaire would be made in the address no. 39 (20+19)
-
- And so forth, until 10 addresses were selected.

8. Selection of respondents

Step 5 – Selection of the respondent in each dwelling

If in the selected dwelling resided more than one person aged 18 or more, the person to be interviewed was randomly chosen using the following procedure:

1. Ask how many persons aged 18 or older reside in the dwelling.
2. Write down the names or initial letters of the eligible persons following the alphabetical order. If there are two persons with the same name, write the name of the younger one first. Example: the mother and the daughter have the same name (Ana). In this case the daughter comes first than the mother.
3. Give a number to each eligible person according to the listed order. The first person will be number 1; the second person will be number 2 and so on and so forth.

Example:

Artur (1)
Gabriel (2)
Júlia (3)
Mateus (4)
Sofia (5)

4. Select the person to interview based on the following Kish grid (Table 6).

Table 6: Kish selection grid

Number of the persons eligible to respond	Number of the questionnaire									
	1	2	3	4	5	6	7	8	9	10
1	1	1	1	1	1	1	1	1	1	1
2	1	2	1	2	1	2	1	2	1	2
3	1	2	3	1	2	3	1	2	3	1
4	1	2	3	4	1	2	3	4	1	2
5	1	2	3	4	5	1	2	3	4	5
6	1	2	3	4	5	6	1	2	3	4
7	1	2	3	4	5	6	7	1	2	3
8	1	2	3	4	5	6	7	8	1	2
9	1	2	3	4	5	6	7	8	9	1
10 +	1	2	3	4	5	6	7	8	9	10

The number of the person to be interviewed would be the cell corresponding to the cross tabulation of the line (number of persons eligible to respond) with the column (number of the questionnaire). Considering that in the example above there were 5 eligible persons and this was questionnaire number 6, the respondent would be person number 1 (Artur). If there were only 3 eligible persons in the dwelling, the respondent would be person number 3 (Júlia).

If the person selected was not at home, the interviewer had to inquire when he/she could best return to find the person at home and/or how the person be contacted in the most easily and

effective way. Interviewers could ask for a telephone number. Interviewers realized however that asking someone in person gave them the best chance that s/he would agree to answer the questionnaire.

Interviewers were advised to secure participation in the interview, indicating their willingness to return at another time if necessary.

If interviewers did not find anyone home, three attempts should be made on different days (including a day in the weekend) and at distinct hours (morning, afternoon, evening) to contact the selected person, before the address and the selected person on the address could be booked as a non-response.

All visits and their outcomes (refusals and no answer) were recorded in the fieldwork file (see examples in tables 7, 8, 9 and 10).

IMPORTANT! THERE IS NO SUBSTITUTION WITHIN THE HOUSEHOLD. If any of the sampled persons was not available or refused to be interviewed no replacement could be drawn from the same household.

Table 7: Example of fieldwork file (I)

Code to be filled in AFTER contacting the dwelling		
Location: CAMPINAS/GOVERNADOR VALADARES/MANTENA	1. Questionnaire completed	Completed/Finished
	2. There wasn't anybody at home	Returning to the dwelling
	3. The selected family member wasn't at home	
Census tract: _____	4. The selected person wasn't available but scheduled another day to respond to the questionnaire	
No. questionnaire: _____	5. Vacant dwelling/absent resident during the period of the fieldwork (The resident was absent and wasn't expected to come back before the end of the fieldwork.)	Replacement by another dwelling
Supervisor: _____	6. The selected address is not a residential dwelling (company, enterprise, public service, etc.) (it can be an office but when the inventory of addresses was made it was not possible to obtain that information)	
Interviewer: _____	7. None of the residents in this dwelling is aged 18 or more	
	8. The randomly selected person to respond to the questionnaire is sick or unable to respond due to health related reasons	
	9. Refuses to respond (either the selected person or the dwelling)	

Table 8: Example of fieldwork file (II)

Dwelling replacement 2*	
-------------------------	--

Table 9: Example of fieldwork file (III)

Location: CAMPINAS/GOVERNADOR VALADARES/MANTENA	Code to be filled in AFTER contacting the dwelling		
	1. Questionnaire completed		
	2. There wasn't anybody at home		
	3. The selected family member wasn't at home		
	4. The selected person wasn't available but scheduled another day to respond to the questionnaire		
	5. Vacant dwelling/absent resident during the period of the fieldwork (The resident was absent and wasn't expected to come back before the end of the fieldwork).		
	6. The selected address is not a residential dwelling (company, enterprise, public service, etc.) (it can be an office but when the inventory of addresses was made it was not possible to obtain that information)		
	7. None of the residents in this dwelling is aged 18 or more		
	8. The randomly selected person to respond to the questionnaire is sick or unable to respond due to health related reasons		
	9. Refuses to respond (either the selected person or the dwelling)		

Table 10 - Example of fieldwork file (IV)

Contacted dwelling Street, No., Floor, Telephone	1 ST VISIT			2 ND VISIT			3 RD VISIT		
	Date (day-month)	Hour (h-m)	Code of the result	Date (day-month)	Hour (h-m)	Code of the result	Date (day-month)	Hour (h-m)	Code of the result
Street Y, no. 2	20/9	15:20	9						
Dwelling replacement 1* Street Y, no. 7	21/9	10:15	3	22/9	18:15	4	23/9	16:30	1

All the fieldwork files were collected and kept by the fieldwork supervisor.

At the end of the fieldwork a synthesis registry by census tract had to be made in order to calculate the refusal rates.

Rules for no answers/ refusals

If a dwelling was recorded as a 'no answer' or the selected person refused to answer, the interviewer had to go to the next address, as long as this address was part of the pre-defined sampling interval. In case of any doubt the interviewers had to contact the fieldwork supervisor.

Sampling protocol Morocco

Random route sampling:

Random route sampling is a multi-stage random sampling method. In random route samples all households with persons belonging to the target group have the same chance to be part of the sample. The first stage is the random selection of primary sampling units (e.g. neighborhoods or other territorial units) where random routes will take place. Then, the team supervisor first selects the household on a fixed random walk within a fixed starting point and in a next step the interviewers use a systematic key for selecting household members.

Regarding the selection of the primary sampling units, we stick to the same regions where we conducted qualitative fieldwork during phase 3. For Morocco this means that we will do interviews in Rabat and Nador. Subsequently, a number of sampling units (geographical clusters) within the areas of Rabat (including Salé and Témara) and Nador (Nador city and the towns: Segangan, Beni Enzar, Selouane, Al-Aroui and Zaio.) are randomly selected.

In Rabat and Nador, the geographical clusters are composed based on cells of a grid drawn on the map. For both regions (Rabat and Nador) twenty sampling units are randomly selected from the number list of geographical clusters. In order to meet the population structure of the province of Nador, fourteen geographical areas are selected in Nador city and six geographical areas are selected in the five surrounding towns.

Within these selected geographical areas the team supervisors already selected the starting points. This starting point is the place where the interviewers start their random walks. These points are pricked in the center of the random selected geographical area.

Selecting households:

Each starting point is located on the map (see 3. The locations). At this point you have to start your random walk. The team supervisors already marked the walking direction, this is always southwards. Always stay on the **right hand side** of the street (seen into the direction you are walking), never cross the street to the other (the left hand) side of the street!

When you know where you have to be (starting point), which direction you have to go and which side of the street you have to be, you have to find out which door to ring. For this purpose you use a fixed number, called a sampling interval. This number plays a key role in the process. The number presents the count number house you have to choose. For Rabat and Nador city we use a sampling interval of five (**5**), which means you have to choose the **fifth door** opening to the street. For the rural areas round Ben Taieb and the suburban areas in Nador, we use a sampling interval of two (**2**), which means you have to choose the **second door** opening.

What you will look for are dwelling units. Now let's define a dwelling unit. By dwelling unit we mean living quarters, whether it is a single house, half a duplex, a basement or attic apartment in a multiple family house, an apartment over a garage or store, or an apartment in a high-rise building. To qualify, dwelling units must have separate kitchen facilities. Institutions or other group quarters (e.g. dormitories, hospitals, prisons, etc.) do NOT qualify as dwelling units, because the occupants do not have their own kitchen facilities. Watch for the mailbox or doorbell (this usually indicates a separate dwelling unit) and attempt a contact at every single fifth potential contact point.

There are several possible options here, where we use similar, but slightly different rules:

Case a) *rural, or one-storey building area* (family houses, twin apartments, other one-storey-buildings).

In most of the cases there is only one dwelling unit in this type of house, that is, you will find one doorbell you can ring. Still, it's possible that more than one dwelling unit shares the same house, living in it separate households. In this case you may find more bells or more mailboxes at the front door. If this is the case, always choose the uppermost bell or mailbox on the right hand side of any display panel – this will be your first bell to ring.

Case b) *apartment building area* (blockhouses, apartment buildings, larger residential complexes).

An apartment house is a collection of households and you should systematically contact apartments just as you would with private households on a street of one family dwelling. Each apartment should be considered as one household or dwelling unit. Therefore, you may interview in as many apartments in any one apartment building as you need to fulfill your assignment requirements, as long as you adhere to the 'every fifth/second door' rule (except for any households identified through focused enumeration).

This is how you **find your starting door**: Go to the top of the building. Approach the apartment nearest the place that you enter the floor (door of elevator, exit of the stairway). You have to move in a clockwise direction, that is, you need to go to the right until you get back to your starting point. On your route you will have to attempt to make a contact at the fifth apartment as you move, clockwise, around the floor. If there are two apartments close to your place of entry, choose the one on the right hand side. If the floor is exhausted (i.e. you have passed each door on it) move on to the floor below and continue your route there (i.e. if the top floor has only three apartments, your first apartment to contact will be on the floor below the top floor, the second apartment on your route). If you exhaust an apartment building, just proceed to the street and continue with the next one to your right.

Selecting household members

At the first house, ask if there is a person in the household whose name starts with an A. If there is nobody ask, if there is someone whose name starts with a B. Continue along the alphabet until there is someone in the household whose name starts with the letter you mentioned. The person whose name starts with the letter you mentioned is the person you have selected for an interview. If there are more than one person whose name starts with the letter you mentioned, use the second letter to determine your selection. Select the person whose second letter comes first in the alphabet.

Random walk route

The general idea is the right-hand rule and the every fifth dwelling selection (or in case of the rural areas in Ben Taieb and surroundings every second dwelling selection). In a classic case you will do the following, after identifying your starting point: you start from the point on the map and walk along the pavement on the right hand side of the street road in the designated direction, and attempt to contact every fifth/second dwelling unit you encounter. If you arrive at a **crossing**, you **will turn to the right**, stay on the right-hand side and continue the search.

It is possible that there are very few dwelling units in the block which was primarily assigned to you. In that case – as the dashed arrows are shown below – you will go further along your starting street (**Moon** street in this case) after you arrived back to your starting point. And so on.

Never turn left, or walk on the left hand side of the street. Even if there are no houses on your side and many houses on the other – **you must not cross to the other side of the street**. That side of the street will be covered when you walk around that block on the right hand side in a clockwise direction. There are however two exceptions. The first exception is when you encounter a **dead end street**. If there is a dead end street within the block assigned, you start at the designated starting point and go to the dead end street on the right hand side of the street in the direction of the arrow. Then walk to the end of the dead end street on the right hand side, cross the street, and walk back on the opposite side of the dead end street. Then turn right continue on the right hand side of the street on which you were originally.

The other exception is when you end up outside the assigned interview location (the primary sampling unit). In that case, you also cross the street and walk back in the opposite direction. While doing so, the other side of the street has now become the right hand side of the street. Go on approaching each fifth house to approach for an interview. Once you reach a new crossing, turn right again.

The rule above only goes for the research locations in the urban areas of Nador or Rabat. In the more suburban research locations you are allowed to walk and approach respondents outside the assigned location (until you have interviewed 10 respondents).

Locations in Nador

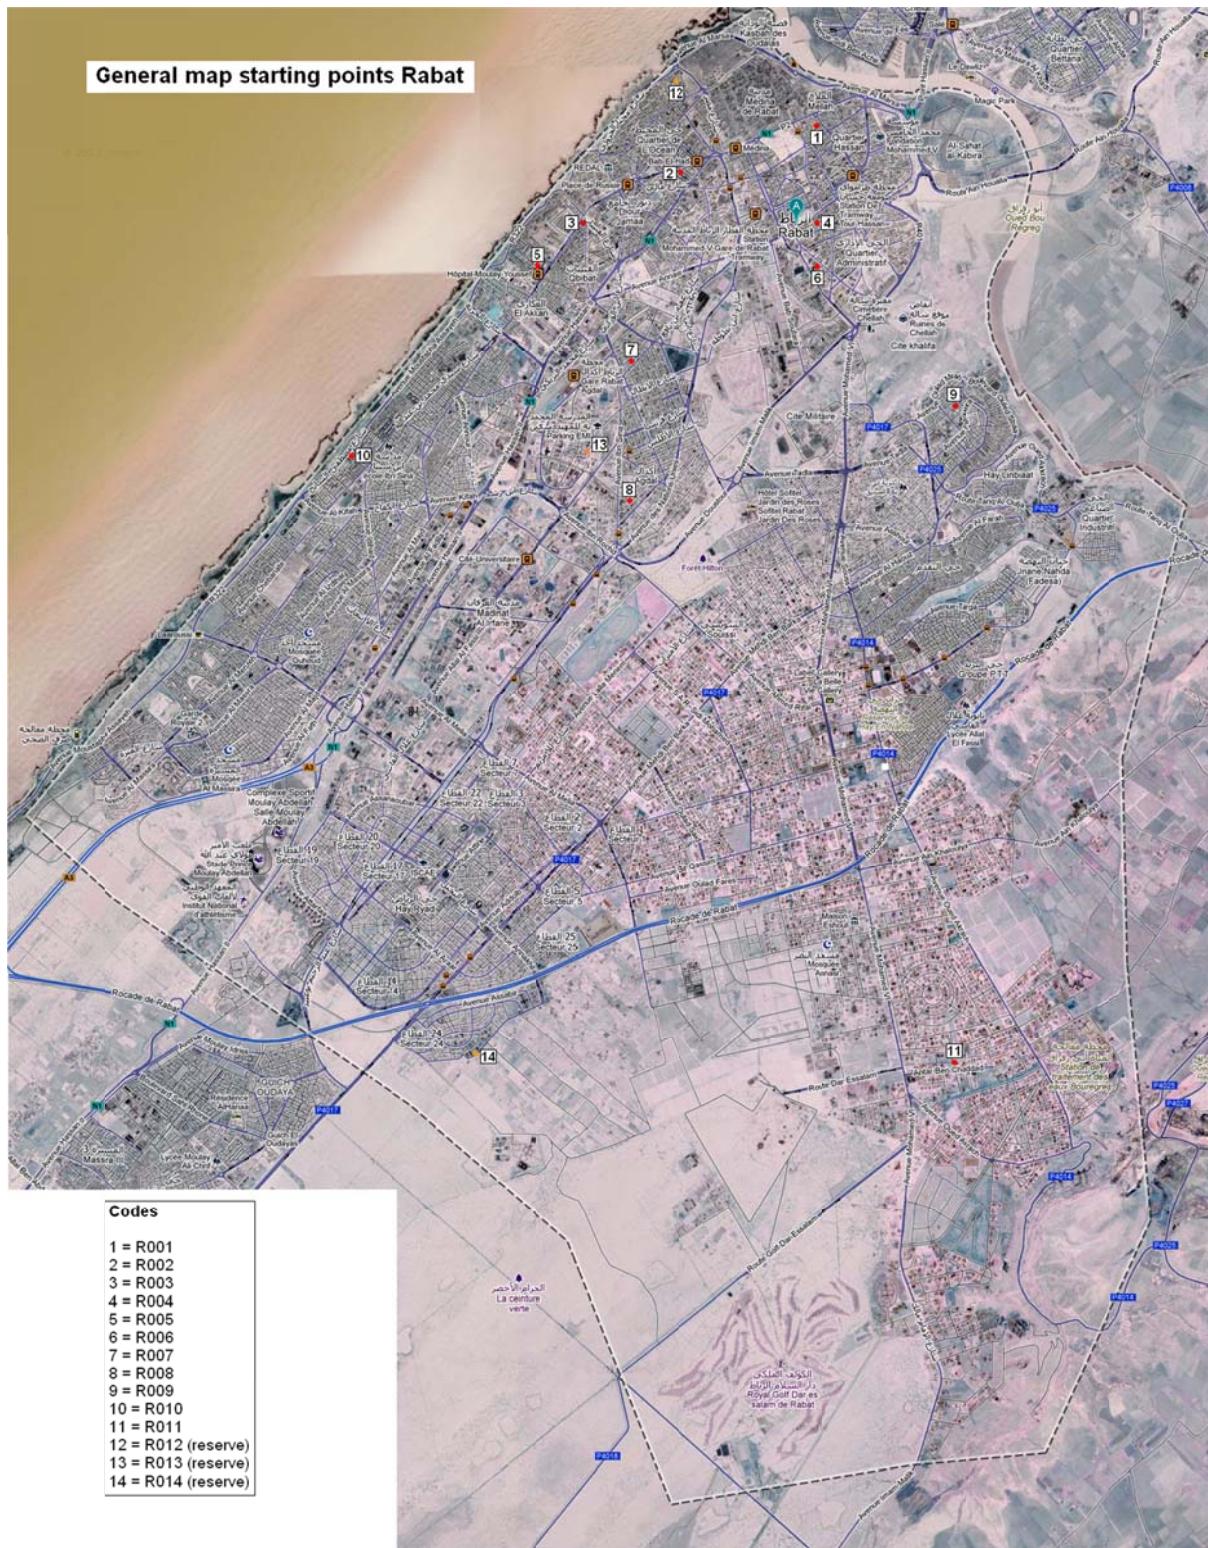

Fourteen starting points are randomly selected in Nador and surrounding “suburbs”. You can find all these starting points on the general map below (also supplied separately). Each starting point is indicated by a number. The orange starting points are reserve starting point. You can use these starting points in case it is impossible to gather 10 respondents in one area. Before using these starting points, please contact a team supervisor! There is a detailed map of every starting point, showing both the map and the satellite image from above. You can use this map to find your way during the field work.

General map starting points

Rabat

Twenty starting points are randomly selected: 11 in the city of Rabat (8 in the core center and 3 in the suburban part of the city), 7 in Salé and 2 in Témara. You can find the starting points on the three general maps below. The orange starting points are reserve starting points. You can use these starting points in case it is impossible to gather 10 respondents in one area. Before using these starting points, please contact a team supervisor! There is a detailed map of every starting point, showing both the map and the satellite image from above. You can use this map to find your way during the field work.

Sampling protocol Ukraine

Target Population:

Resident population aged 18 and above in two strategic locations: urban Kyiv city and urban-rural Lviv region (excluding urban area of Lviv city but including other urban settlements, largely incorporated into the Phase 3, with population over 10.000 people). For the age brackets, it has been decided with the Sampling Task Force Group that interviewers will be instructed to consider individually if a considerably aged respondent is interviewed or not (in fact, there are no age restrictions during the elections or public opinion polls, so, the retired persons from 60 and above, if reasonably active and socially integrated, should be included in the sample). To reach a representative sample, including different groups of employed population, the interviews will be done not only during working hours but over evenings and week-ends.

To select the households units, the first door was chosen randomly as ‘first living dwelling’ where it was possible to find a respondent. Then, a sampling interval was used to choose the next door. Sampling interval was calculated by the supervisor for each cluster individually. The dwelling unit was defined similarly to other locations in origin courtiers (specifically, institutions or other group quarters such as dormitories, hospitals and prisons did not qualify as dwelling units; only apartments, single houses, etc. were included, and only single households were counted).

Sampling within the household is done according the first-birthday method. If a selected respondent is not reached during the interview, it is decided that one appointment for return visit is made same day during the hours when a respondent might be available.

Method of Data collection:

F2F interview

Sample size:

400 interviews

Strata 1(Kyiv) – 200 interviews

Strata 2 (Lviv region) – 200 interviews

Sampling frame:

Voters' statistics of the Central Election Committee of Ukraine, 2012 (this will provide the most up-to-date data on precincts – See: <http://www.cvk.gov.ua/>).

Sample size distribution between urban and rural areas:

Strata 1:

Kyiv – 100% urban area – 200 interviews

Strata 2 (Lviv region except Lviv):

2.1 Urban population – 43% (86 interviews)

2.2 Rural population – 57% (114 interviews)

Sampling method:

Multistage stratified probability-proportional-to-size cluster sampling with random route.

Clusters:

First, a full list of clusters with cluster name, population size, cumulative size were made based on the voters lists for each location. Then clusters were sampled systematically using a fixed interval. This interval was calculated by dividing the size of total population by the number of batches.

In urban areas election districts/precincts will be used as clusters (their sizes vary from 500 to 2500 people). In Kiev, two clusters will be selected in each of the ten administrative districts (20 clusters all

together, half in the central part of the districts and half in the ‘uptown’). In rural settlements villages often act as precincts or, sometimes, are divided between the two precincts (small villages will be merged). In Lviv region, 9 clusters will be selected in the urban areas and 11 in rural areas.

Batches size and non-response:

Batches size is 10 interviews. Overall response rate in Ukraine, based on the previous surveys, is nearly 65% allowing for 35% increase of batches size. However, response rates are not equal in urban and rural areas and in different parts of Ukraine. The lowest response rate is observed in Kyiv – nearly 40%; in urban area in Lviv region the response rate is up to 60%; in rural area in Lviv region the response rate is up to 70%. In line with this, for each strata the Gross Batch Size is different: Kyiv – 16 interviews; urban area in Lviv region – 14 interviews; rural area in Lviv region – 13 interviews.

Sampling intervals:

Sampling intervals will be calculated for each cluster according the formula given in the EUMAGINE project paper. The approximate household size in Ukraine, based on the previous surveys, is 3.5 persons.

Calculating sampling interval in Kyiv (example for cluster 800750, total population size 1795):

Estimate number of households: $1795/3.5=513$

NonResponse in Kyiv: 60%.

Gross Batch size (GB): $10/(100\%-60\%)=25$.

Sampling interval= $513/(25*3)=6,84$.

Sampling interval: 7.

Calculating sampling interval in Lviv oblast_urban area (example for cluster 460502, total population size 2283):

Estimate number of households: $2283/3.5=652$

NonResponse rate in urban area in Lviv region: 40%.

Gross Batch size: $10/(100\%-40\%)=16,6$. (so, GB=17).

Sampling interval= $652/(17*3)=12,7$.

Sampling interval: 13.

Calculating sampling interval in Lviv oblast_rural area (example for cluster 460989, total population size 1524):

Estimate number of households: $1524/3.5=435$

NonResponse rate in rural area in Lviv region: 30%.

Gross Batch size: $10/(100\%-30\%)=14,28$ (so, GB=14).

Sampling interval= $435/(14*3)=10,3$.

Sampling interval: 10.

Low number of respondents with the migration experience as possible obstacle for analysis:

The Phase 4 questionnaire contains a good deal of questions about migration experience. According to our assumption based on the previous thematic surveys we will have up to 5% of respondent with migration experience (near 20 respondents) in our random sample. This is not enough for conducting regression or other multidimensional statistical analysis for migration-related variables. We suggest conducting 20 extra interviews with respondent who have migration experience (multistage stratified probability-proportional-to-size cluster sampling with random route and quota selection on the last stage should be applied). Total number of interviews conducted during the field work should be 420.

Provisional timing:

First round of piloting is schedules for the period from July 23rd to August 6th. Up to 20 interviews will be conducted during the first round with 10 interviews in Kiev and 10 in Lviv region. Respondents for the pilot F2F interview will be selected randomly to test both Russian and Ukrainian versions of the questionnaire with both genders, different age groups, groups of different migration experience.

Second round of piloting – August 20th to August 31st.

Start of survey – beginning of September (with roughly two weeks of field work plus one week for quality control).

Sampling in Kiev

According to the Voters' statistics of the Central Election Committee of Ukraine (2012) the total amount of voters in Kiev is 2,153,408. After hospitals, prison, etc. are excluded from this list the election districts, the final number of voters in households is 2,129,536.

From the full list of clusters (precincts) in Kiev 20 clusters were selected using the probability-proportional-to size procedure (see Table 1). The list of clusters is organized according to the geographical districts – first, all election districts of one geographical district, than all election districts of the other geographical district, etc. Geographical districts are sorted in alphabetical order. Such procedure provides the geographical representativeness of the sample. Sampling intervals are calculated for each cluster according to the formula given in the EUMAGINE project paper.

Table 1. Selected clusters in Kyiv

Cluster name*	Area frames of the selected clusters/addresses	Size (Number of voters)	Batches	No. of interviews conducted
800037	м.Київ – вул.Академіка Зabolотного: 148А–156 к.2; вул.Академіка Лебедєва, вул.Липнева, вул.Метрологічна	2320	1	10

**unique number of the selected election district in the National List of the Central Election Committee of Ukraine, 2012) (onwards –cluster number)*

Sampling in Lviv region

According to the Voters' statistics of the Central Election Committee of Ukraine (2012) the total amount of voters in Lviv region (except Lviv) is 1,385,402. After hospitals, prison, etc. are excluded from this list the election districts, the final number of voters in households is 1,376,863.

At the first stage of sample elaboration all population was divided into two strata:

Strata 1 - Urban population – 593,517 voters

Strata 2 – Rural population – 783,346 voters

According to the number of voters in each strata number of clusters were calculated for each strata (see table 2).

Table 2. Number of selected clusters in urban and rural areas of Lviv region

Strata	Number of voters	%	Number of clusters
Strata 1 - Urban population	584923	43	9
Strata 2 - Rural population	780912	57	11
Total	1365835	100	20

For each strata the full list of clusters (election districts) were elaborated.

Again, the list of clusters is organized according to the geographical districts – first, all election districts of one geographical district, then all election districts of the other geographical district, etc.

Geographical districts are sorted in alphabetical order. Such procedure provides the geographical representativeness of the sample.

For Strata 1 (Urban population) 11 election districts were selected from the full list of election districts using the probability-proportional-to size procedure line with the EUMAGINE methodology (see Table 3). Small clusters were merged.

For Strata 2 (Rural population) 9 election districts were selected from the full list of election districts using the probability-proportional-to size procedure line with the EUMAGINE methodology (see Table 4). In most cases, each village forms a cluster (election district). If a small cluster was selected, it has been merged with the nearest cluster from the same geographical district.

Table 3. Selected clusters in Lviv region – Strata 2.1 (Urban population)

Text in bold should be read aloud by the interviewer (except question numbers)

Underlined text should be read with emphasis

Text in grey should not be read aloud by the interviewer

Text in italics contains instructions for the interviewer

➔ Shows routing to specific questions depending on answers

Hello, my name is.....I am working on an academic research project run by the University of Oxford in the UK with academic partners in Lisbon, Rotterdam, Oslo and [Governador Valadares/Kiev/Rabat] looking at migration between Brazil, Morocco and Ukraine and Western Europe. As part of this project, I am conducting interviews in [location] to ask people about changes in the region and experiences of migration. You have been chosen at random and I would like to ask your permission to interview you.

I have an information sheet with more details about this project.

Before you decide, I would like to explain a bit more about the interview process, how we will use the information and answer any questions that you have.

Since everyone's experiences are different, the duration of the interview varies – it should be between half an hour, and a maximum of one hour.

If any question makes you feel uneasy, you are not obliged to answer. You can stop the interview at any time.

We guarantee that all the information you provide us with will be kept confidential.

Before we start: do you have any questions?

Once any questions are answered...

Are you happy to proceed with the interview?

To be completed BEFORE the interview

Notes

.....

.....

.....

A. Background

We will start this interview with some questions about yourself.

A1 In which year were you born?

— — — — Year
— — — — Non-response code

A2 Were you born in [Brazil/ Morocco/Ukraine]?

- 1 Yes → A3
2 No → A4
— — — Non-response code → A5

A3 Where in [Brazil/ Morocco/Ukraine] were you born?

— — — — Location code → A5
— — — — Non-response code → A5

A4 In which country were you born?

Write down the name of the country and in case of a former USSR country, ask relevant follow up questions to be able to determine the correct country code later on. Please try not to use the 'former USSR' code too much. Only if the respondent is unable to determine the specific former USSR country, use the former USSR code.
— — — — Country code
— — — — Non-response code

A5 What is your first (native) language?

- | | |
|---|--------------------------------------|
| 1 <input type="checkbox"/> Portuguese | 6 <input type="checkbox"/> English |
| 2 <input type="checkbox"/> Moroccan Arabic (Darija) | 7 <input type="checkbox"/> Dutch |
| 3 <input type="checkbox"/> Amazigh | 8 <input type="checkbox"/> Norwegian |
| 4 <input type="checkbox"/> Ukrainian | 9 <input type="checkbox"/> Other |
| 5 <input type="checkbox"/> Russian | — — — Non-response code |

A6 When you were born, what was your citizenship (or citizenships)?

— — — — country code
— — — — country code
— — — — country code
— — — — Non-response code

A7 Have you changed or acquired a new citizenship since birth?

- 1 Yes
2 No → B1
— — — Non-response code

A8 **Which citizenship (or citizenships) do you have at the moment ?**

Country code	Non-response code
A _____	_____
B _____	_____
C _____	_____

B. Family

Thank you. The next questions are about your family and the household you live in.

B1 Today, are you married to someone, or in a stable union (living together) with a partner...

- 1 who is born in [Brazil / Morocco / Ukraine] ➔ B3
- 2 from another country, or
- 3 are you neither married nor in a relationship? ➔ B3

_____ Non-response code

B2 In which country was your spouse or partner born?

Write down the name of the country and in case of the former USSR, ask relevant follow up questions to be able to determine the correct country code later on.

_____ Country code

_____ Non-response code

B3 Do you have children?

- 1 Yes
- 2 No

_____ Non-response code

B4 Apart from you, who else lives in this household?

If the person lives alone the appropriate code is 777.

Relationship
code

Non-response code

A	_____	_____
B	_____	_____
C	_____	_____
D	_____	_____
E	_____	_____
F	_____	_____
G	_____	_____
H	_____	_____
I	_____	_____
J	_____	_____

C. General changes in region

Thank you. I would now like to ask you some questions about what you think about the region where you live: [Governador Valadares/Mantena/Nador/Rabat/Kiev/Lviv region]

C1 Thinking of the last 10 years, would you say you agree or disagree with the following statements:

If respondents hesitate to commit to an answer, encourage them by asking whether they mostly agree or mostly disagree. If they remain undecided, use the 888 non-response code. Please note that the city is also included in the region or area.

		Agree	Disagree	Non-response code
A	It has become easier to find a job	1 <input type="checkbox"/>	2 <input type="checkbox"/>	_____
B	Corruption has become less	1 <input type="checkbox"/>	2 <input type="checkbox"/>	_____
C	Women are increasingly having the same opportunities as men	1 <input type="checkbox"/>	2 <input type="checkbox"/>	_____
D	People are increasingly having the opportunity to study at university, regardless of their background	1 <input type="checkbox"/>	2 <input type="checkbox"/>	_____
E	In general, people in this region have become poorer	1 <input type="checkbox"/>	2 <input type="checkbox"/>	_____
F	People can get their children into better schools	1 <input type="checkbox"/>	2 <input type="checkbox"/>	_____
G	Access to health care has improved	1 <input type="checkbox"/>	2 <input type="checkbox"/>	_____
H	Crime and violence are decreasing	1 <input type="checkbox"/>	2 <input type="checkbox"/>	_____
I	Politicians and public authorities in [Brazil / Morocco / Ukraine] have become more accountable to citizens	1 <input type="checkbox"/>	2 <input type="checkbox"/>	_____
J	It has become easier to travel around the country	1 <input type="checkbox"/>	2 <input type="checkbox"/>	_____

C2 Are there many people in this region who have moved abroad?

- 1 Yes
2 No ➔ C4

_____ Non-response code

C3 Which countries have they mostly moved to?

If respondent hesitates please encourage them gently.

- _____ country code
_____ Non-response code

C4 Have you seen houses/ apartments in this region that [Brazilians / Moroccans / Ukrainians] have built/ renovated with money earned abroad?

- 1 Yes
2 No ➔ D1
_____ Non-response code

C5 Do you notice any differences between these houses and other houses?

With ‘these houses’ we mean houses built or bought by emigrants or with money earned abroad.

- 1 Yes
2 No ➔ D1
_____ Non-response code

C6 How are they different?

Multiple answers possible. If respondents hesitate to commit to an answer, encourage them by asking whether these houses differ in style, construction or anything else?

- 1 they are bigger or higher
2 they have different colours
3 they have a foreign style (*on the outside or inside*)
4 they are more renovated
5 they are recently built (new)
6 they use different materials (higher quality/ brought from abroad)

_____ Non-response code

D. Migration history

Thank you. I would now like to ask you about your own experiences of international migration.

D1 Have you ever lived outside [Brazil / Morocco / Ukraine] for three months or more?
‘Living in another country for at least three months’ means having that country as one’s primary residence, regardless of legal status and regardless of shorter trips abroad.

1 Yes

2 No ➔ D8

_____ Non-response code

D2 Can you tell me a bit more about that? Starting with the first foreign country you went to, in which countries have you lived?

If the respondent hesitates, please encourage them gently.

Country code	Year	Duration	Non-
			response code
A _____	_____	1 <input type="checkbox"/> < 1 year. 2 <input type="checkbox"/> : ≥ 1 year	_____
B _____	_____	1 <input type="checkbox"/> < 1 year. 2 <input type="checkbox"/> : ≥ 1 year	_____
C _____	_____	1 <input type="checkbox"/> < 1 year. 2 <input type="checkbox"/> : ≥ 1 year	_____
D _____	_____	1 <input type="checkbox"/> < 1 year. 2 <input type="checkbox"/> : ≥ 1 year	_____
E _____	_____	1 <input type="checkbox"/> < 1 year. 2 <input type="checkbox"/> : ≥ 1 year	_____
F _____	_____	1 <input type="checkbox"/> < 1 year. 2 <input type="checkbox"/> : ≥ 1 year	_____
G _____	_____	1 <input type="checkbox"/> < 1 year. 2 <input type="checkbox"/> : ≥ 1 year	_____
H _____	_____	1 <input type="checkbox"/> < 1 year. 2 <input type="checkbox"/> : ≥ 1 year	_____
I _____	_____	1 <input type="checkbox"/> < 1 year. 2 <input type="checkbox"/> : ≥ 1 year	_____
J _____	_____	1 <input type="checkbox"/> < 1 year. 2 <input type="checkbox"/> : ≥ 1 year	_____

If all the moves listed by the respondent have been within the USSR (before 1991), go to section E.

D3 **People can have many different reasons for moving from one country to another. I am going to mention several possible reasons. For each one, please say whether or not it was an important motivation for your move to [country] in [year of immigration].**

Choose the most recent move they listed in the previous question.

	Was this important?			Non-response code
		Yes	No	
A Experiencing the culture and life in another country,		1 <input type="checkbox"/>	2 <input type="checkbox"/>	_____
B Opportunities for work,		1 <input type="checkbox"/>	2 <input type="checkbox"/>	_____
C Opportunities for studying,		1 <input type="checkbox"/>	2 <input type="checkbox"/>	_____
D Learning a language,		1 <input type="checkbox"/>	2 <input type="checkbox"/>	_____
E Being with family members or other people you care about.		1 <input type="checkbox"/>	2 <input type="checkbox"/>	_____

D4 **Which of the motivations for your move to [country] in [year of immigration] do you consider the most important? Was it....**

Re-read the motivations for which the 'yes' box was ticked in question D3. If respondent answered 'no' to all options in D3, reread all the five options. The respondent can only choose one option this time.

- 1 **Experiencing the culture and life of another country**
- 2 **Opportunities for work**
- 3 **Opportunities for studying**
- 4 **Learning a language**
- 5 **Being with family members or other people you care about**

_____ Non-response code

D5 Thank you. Then, there may also be things about the situation in the country where people live which makes them decide to leave. Again, I am going to mention several possible reasons. For each one, please say whether or not it was an important motivation for your decision to leave [Brazil / Morocco / Ukraine] in [year of immigration].

		Was this important?		Non-response code
		Yes	No	
A	A lack of opportunities for work or professional development in [Brazil / Morocco / Ukraine]	1 <input type="checkbox"/>	2 <input type="checkbox"/>	_____
B	Political oppression in [Brazil / Morocco / Ukraine]	1 <input type="checkbox"/>	2 <input type="checkbox"/>	_____
C	Violence or crime in [Brazil / Morocco / Ukraine]	1 <input type="checkbox"/>	2 <input type="checkbox"/>	_____
D	Anything that had to do with the social or cultural environment in [Brazil / Morocco / Ukraine]	1 <input type="checkbox"/>	2 <input type="checkbox"/>	_____
E	Difficulties within your family in [Brazil / Morocco / Ukraine]	1 <input type="checkbox"/>	2 <input type="checkbox"/>	_____
F	Earning money to send back to [Brazil / Morocco / Ukraine]	1 <input type="checkbox"/>	2 <input type="checkbox"/>	_____

D6 Which of these reasons for leaving [Brazil/Morocco/Ukraine] do you consider the most important? Was it....

Re-read the motivations for which the 'yes' box was ticked in question D5. If respondent answered 'no' to all options in D5, re-read all the options. The respondent can only choose one option this time.

- 1 A lack of opportunities for work or professional development in [Brazil/Morocco/Ukraine]
- 2 Political oppression in [Brazil/Morocco/Ukraine]
- 3 Violence or crime in [Brazil/Morocco/Ukraine]
- 4 Anything that had to do with the social or cultural environment in [Brazil/Morocco/Ukraine]
- 5 Difficulties within your family in [Brazil/Morocco/Ukraine]
- 6 Earning money to send back to [Brazil/Morocco/Ukraine]

_____ Non-response code

Thank you. You have indicated why you have moved to [country] in [year of immigration]. Now at some point you decided to return to [Brazil/Morocco/Ukraine]. I would now like to ask you about your reasons for returning to [Brazil/Morocco/Ukraine] after your stay in [country of destination]

D7 Again, I am going to mention several possible reasons. For each one, please say whether or not it was an important motivation for your decision to return to [Brazil / Morocco / Ukraine].

		Important?		Non-response code
		Yes	No	
A	Achieving what you wanted to do abroad	1 <input type="checkbox"/>	2 <input type="checkbox"/>	_____
B	Changing family circumstances	1 <input type="checkbox"/>	2 <input type="checkbox"/>	_____
C	Education for children in [Brazil / Morocco / Ukraine]	1 <input type="checkbox"/>	2 <input type="checkbox"/>	_____
D	New economic opportunities in [Brazil / Morocco / Ukraine]	1 <input type="checkbox"/>	2 <input type="checkbox"/>	_____
E	Being with family members or people you care about in [Brazil / Morocco / Ukraine]	1 <input type="checkbox"/>	2 <input type="checkbox"/>	_____
F	Returnig to the familiar life-style	1 <input type="checkbox"/>	2 <input type="checkbox"/>	_____
G	Being unemployed in [country of destination]	1 <input type="checkbox"/>	2 <input type="checkbox"/>	_____

Thank you for sharing your motivations for moving and returning. Now that we have talked about moves that have actually taken place, I would now like to talk about moves that never took place.

D8 Have you ever tried to leave [Brazil/Morocco/Ukraine] to live or work abroad and then not succeeded?

- 1 Yes
 2 No ➔ E1
 _____ Non-response code

D9 Which countries did you try to go to?

- _____ Country code
 _____ Non-response code

D10 Why did you not succeed in going?

Multiple answers possible

- 1 You did not obtain the necessary visa
 2 No one offered to give you accommodation
 3 Your contacts told you that it was not a good time to go
 4 You did not have enough money to pay for the trip
 5 You were turned back at the border
 6 Other reason
 _____ Non-response code

E. Movements from network

Thank you. I would now like to ask you some questions about people from [Brazil / Morocco / Ukraine] you know who have lived or who are living outside the country.

E1 Do you personally know anybody who is living in Western Europe?

1 Yes

2 No → E4

_____ Non-response code

E2 Roughly – how many people do you know?

Read aloud the answer categories ONLY if respondents hesitate to commit to an answer.

1 Between 1 and 3

2 Between 4 and 10

3 More than 10

_____ Non-response code

E3 Are they...

1 All [Brazilian / Moroccan / Ukrainian]s,

2 are some [Brazilian / Moroccan / Ukrainian]s, or

3 are there no [Brazilian / Moroccan / Ukrainian]s among them?

_____ Non-response code

Thank you. I am going to ask first about family abroad and then about your friends and acquaintances.

E4 In the last ten years, have any of your family members ever lived outside of [Brazil/Morocco/Ukraine], or is any family member them currently living abroad?

With living abroad we mean that they stayed for at least three months. We do not want to include tourist travel, but we do want to know about short term labour migrants, students or longer family visits. Familymembers may also include the extended family (see relation code).

1 Yes

2 No → E6

_____ Non-response code

E5 Please tell me a bit more about these family members. In which countries did or do they reside? Please start with family members you feel most close to.

Children (up to 16) and persons living together should NOT be considered separately. (for example: husband and wife and their respective children)

Relationship code	Most recent country residence abroad	Country residence abroad	Country residence abroad	Non-response code
A	-----	-----	-----	-----
B	-----	-----	-----	-----
C	-----	-----	-----	-----
D	-----	-----	-----	-----
E	-----	-----	-----	-----
F	-----	-----	-----	-----
G	-----	-----	-----	-----
H	-----	-----	-----	-----
I	-----	-----	-----	-----
J	-----	-----	-----	-----

E6 Apart from your family, do you personally know anybody else from [Brazil/Morocco/Ukraine] who has lived abroad in the last ten years, or who is currently living abroad?

- 1 Yes
2 No ➔ F1

----- Non-response code

E7 Please tell me a bit more about these friends or acquaintances. In which countries did or do they reside? Please do not worry if you cannot remember everyone, we would like just the general picture.

Children (up to 16) and persons living together should NOT be considered separately. (for example: husband and wife and their respective children)

Relationship code	Most recent country residence abroad	Country residence abroad	Country residence abroad	Non-response code
A	-----	-----	-----	-----
B	-----	-----	-----	-----
C	-----	-----	-----	-----
D	-----	-----	-----	-----
E	-----	-----	-----	-----
F	-----	-----	-----	-----
G	-----	-----	-----	-----
H	-----	-----	-----	-----
I	-----	-----	-----	-----
J	-----	-----	-----	-----

F. Transnational contacts and Western Europe

Thank you. I would now like to ask you some questions about Western Europe.

F1 Which countries do you think of if you hear the phrase Western Europe?

If respondents hesitate to commit to an answer please read the following: 'Please do not be afraid of giving inaccurate answers, we are only interested in your personal opinion of what Europe means to you.'

- _____ Country code
_____ Non-response code

F2 I will now read several statements about Western Europe. For each one, try to say whether you agree or disagree.

If respondents hesitate to commit to an answer, encourage them by asking whether they mostly agree or mostly disagree. If they remain undecided, use the 888 non-response code.

		Agree	Disagree	Non-response code
A	In Western Europe, there are good economic opportunities	1 <input type="checkbox"/>	2 <input type="checkbox"/>	_____
B	In general, people in Western Europe have a friendly attitude towards immigrants from [Brazil / Morocco / Ukraine]	1 <input type="checkbox"/>	2 <input type="checkbox"/>	_____
C	Corruption is not very widespread in Western Europe	1 <input type="checkbox"/>	2 <input type="checkbox"/>	_____
D	In Western Europe, immigration policies are very strict	1 <input type="checkbox"/>	2 <input type="checkbox"/>	_____
E	The legal system treats everybody equally in Western Europe	1 <input type="checkbox"/>	2 <input type="checkbox"/>	_____
F	In Western Europe, everybody has access to health care	1 <input type="checkbox"/>	2 <input type="checkbox"/>	_____

F3 How often would you say that you communicate with people in Western Europe, including people you do not personally know? Is it...

- 1 almost every day,
2 every week,
3 every month,
4 less often, or
5 never? ➔ G1

_____ Non-response code

F4 And which of these forms of communication do you use?

Multiple answers possible

- 1 **Phone or Skype** (or any other form of online telephone communication)
- 2 **Messenger** (e.g. MSN, Yahoo)
- 3 **Text messages**
- 4 **E-mail**
- 5 **Social media, such as Facebook**
- 6 **Other web sites or blogs**
- 7 **Letters or tapes** (or other forms of communication)
- 8 **Communicate personally during visits** (the place of the meetings does not matter)

_____ Non-response code

F5 With whom in Western Europe have you had contact with over the past month? Which country are they in?

List up to five people. If respondent had no contact with anyone use non-response code 777.

- | | |
|-------------------------|--------------------|
| A _____ Relation code | _____ Country code |
| B _____ Relation code | _____ Country code |
| C _____ Relation code | _____ Country code |
| D _____ Relation code | _____ Country code |
| E _____ Relation code | _____ Country code |
| _____ Non-response code | |

F6 On the whole, does your contact with people who live in Western Europe make you...

- 1 **more interested in moving to Western Europe**
- 2 **less interested in moving there, or**
- 3 **does it not make any difference?**

_____ Non-response code

F7 Does anybody in Western Europe send you money or gifts...

- 1 **on a regular basis,**
- 2 **from time to time, or**
- 3 **once, or**
- 4 **not at all? → G1**

_____ Non-response code

F8 Do you think that receiving this money or gifts makes you...

- 1 **more interested in moving to Western Europe**
- 2 **less interested in moving there, or**
- 3 **did it not make any difference?**

_____ Non-response code

G. Migration aspirations

Thank you. I would now like to ask you some questions about possible moves abroad in the future. This can be to Western Europe, but also to other parts of the world.

G1 Do you have a passport that allows you to travel abroad?

This refers to the document to travel not the permission to travel (visa).

- 1 Yes
 - 2 No
- _____ Non-response code

G2 Ideally, if you had the opportunity, would you like to go abroad to live or work some time during the next five years, or would you prefer to stay in [Brazil/Morocco/Ukraine]?

- 1 Yes, go abroad
 - 2 No, stay in [Brazil/Morocco/Ukraine] ➔ H1
- _____ Non-response code

G3 Which country would you like to go to as your first preference?

- _____ Country code
_____ Non-response code

G4 Have you taken any action to prepare a move abroad?

Action entails everything ranging from collecting information to buying a ticket.

- 1 Yes
 - 2 No ➔ G6
- _____ Non-response code

G5 What precise steps have you undertaken to move abroad?

Multiple answers possible

- 1 Apply for enrolment at a university
 - 2 Apply for a scholarship
 - 3 Apply for papers (e.g. visa)
 - 4 Save money
 - 5 Arrange for transportation
 - 6 Contact people known in that country for assistance
 - 7 Apply for a job
 - 8 Visit the embassy
 - 9 Collected information from media or the internet
- _____ Non-response code

G6 How likely do you think it is that you will actually go abroad to live or work? Is that.....

- 1 Almost certain,
 - 2 likely,
 - 3 a little likely,
 - 4 or not likely at all?
- _____ Non-response code

H. Contact with returned migrants

Now we would like to talk a bit about people who have lived abroad and are now back in [Brazil/Morocco/Ukraine]

H1 Do you know any [Brazilians / Moroccans / Ukrainians] who previously lived in Western Europe and who have now returned?

1 Yes

2 No → I1

_____ Non-response code

H2 Roughly how many? Would you say that it is...

1 **5 or fewer,**

2 **between 6 and 10, or**

3 **more than 10?**

_____ Non-response code

H3 Would you say that their housing conditions are generally....

1 **better,**

2 **about the same, or**

3 **worse than before they moved abroad?**

_____ Non-response code

H4 Do you know of businesses here (cafes, restaurants, shops or other) that were set up by returned migrants?

1 Yes

2 No

_____ Non-response code

I. Views on migration and its impact on region

Thank you. We are approaching the end now. I would like to ask you about your views on migration to Western Europe and its impact on [Brazilian / Moroccan / Ukrainian] society.

I1 I will now read several statements. For each one, try to say whether you agree or disagree.

If respondents hesitate to commit to an answer, encourage them by asking whether they mostly agree or mostly disagree. If they remain undecided, use the 888 non-response code.

		Agree	Disagree	Non-response code
A	Many young people in [Brazil / Morocco / Ukraine] would like to move to Western Europe.	1 <input type="checkbox"/>	2 <input type="checkbox"/>	-----
B	If you want to move to Western Europe, you need to know somebody there who can help you.	1 <input type="checkbox"/>	2 <input type="checkbox"/>	-----
C	Moving to Western Europe is a way of gaining respect in [Brazil / Morocco / Ukraine].	1 <input type="checkbox"/>	2 <input type="checkbox"/>	-----
D	In [Brazil / Morocco / Ukraine], there are good economic opportunities.	1 <input type="checkbox"/>	2 <input type="checkbox"/>	-----
E	Moving to Western Europe is seen by [Brazilians/ Moroccans/Ukrainians] as a good way to improving one's financial situation.	1 <input type="checkbox"/>	2 <input type="checkbox"/>	-----
F	It is bad for [Brazil / Morocco / Ukraine] when people move to Western Europe.	1 <input type="checkbox"/>	2 <input type="checkbox"/>	-----

Thank you. Now I would like to ask you some more questions about your views regarding the impact of international migration in this region.

I2 In this region is it possible to identify particular neighbourhoods or areas that are more associated with migration or emigrants?

1 Yes

2 No → I4

----- Non-response code

I3 Why is that?

Multiple answers possible

1 most migrants left from those regions/that region

2 most migrants have bought or built houses in those regions/that region (and e.g. as a result houses in the area become more expensive)

3 it is where most businesses set up by migrants are located

4 it is where one finds travel agencies and other services related to migration (such as money transfer agencies or internet cafes, for example)

5 it is where peoples' conditions have improved

----- Non-response code

I4 Thinking of influence of migrants in the region, would you say that.....

- 1 most migrants or their families have established businesses or improved local activities (in agriculture for example), that
- 2 some have and some have not
- 3 most have not, or that
- 4 none of the migrants or their families have established businesses or improved local activities?

_____ Non-response code

I5 In your view, what are the more evident effects of international emigration in this city/village? For each of the following statements please say whether you agree or disagree

'If respondents hesitate to commit to an answer, encourage them by asking whether they mostly agree or mostly disagree. If they remain undecided, use the 888 non-response code.'

		Agree	Disagree	Non-response code
A	Living conditions have improved for family members of people who have moved abroad	1 <input type="checkbox"/>	2 <input type="checkbox"/>	_____
B	There are fewer job opportunities for people who live here	1 <input type="checkbox"/>	2 <input type="checkbox"/>	_____
C	The local economy has been boosted by remittances that migrants send to their families	1 <input type="checkbox"/>	2 <input type="checkbox"/>	_____
D	The population of this region has declined as a result of migration	1 <input type="checkbox"/>	2 <input type="checkbox"/>	_____
E	Families have become divided by migration	1 <input type="checkbox"/>	2 <input type="checkbox"/>	_____
F	Migrants have contributed to the funding of new infrastructures such as roads, health centres or schools	1 <input type="checkbox"/>	2 <input type="checkbox"/>	_____
G	Children have difficulties growing up without parents or with one parent abroad	1 <input type="checkbox"/>	2 <input type="checkbox"/>	_____
H	Migration has introduced cultural influences and customs from abroad	1 <input type="checkbox"/>	2 <input type="checkbox"/>	_____
I	Overall, it is good for your city/ village that people moved abroad	1 <input type="checkbox"/>	2 <input type="checkbox"/>	_____
J	New businesses have been established by migrants and their families	1 <input type="checkbox"/>	2 <input type="checkbox"/>	_____
K	Many families have become dependent on remittances	1 <input type="checkbox"/>	2 <input type="checkbox"/>	_____

I6 When would you say that the impacts of international migration began in this village/city? Was it...

If the respondent indicates that there has not been any impact, use non-response code 777.

- 1 Around or less than five years ago,
- 2 Between 5 – 10 years ago,
- 3 Between 11 – 20 years ago,
- 4 More than 20 years ago, or
- 5 Before that

_____ Non-response code

I7 Is there any particular time of the year when this village/city is more affected by the return of migrants on holidays?

- 1 Yes
 - 2 No → J1
- — — Non-response code

I8 When is that?

Multiple answers possible

- 1 During the Summer holidays
- 2 During the Easter Break
- 3 During Ramadam
- 4 Around Christmas/New Year
- 5 Other local festivity

— — — Non-response code

J. Education and work

Thank you. We now move on to the final questions when we turn back to you and ask about your education and work.

J1 What level of education have you completed?

- 1 No formal schooling or less than primary school completed
- 2 Primary school completed (corresponding to around 6 years of education)
- 3 Lower secondary school completed (UK equivalent – GSCE age 16)
- 4 Upper secondary school completed (UK equivalent – A-level age 18)
- 5 Post-secondary vocational training (completed at least one year)
- 6 Undergraduate tertiary education (completed at least one year)
- 7 Postgraduate tertiary education (completed at least one year)

_____ Non-response code

Ask the necessary follow-up questions to determine the appropriate level of education (e.g. about total years of education or age when finished education).

J2 Do you have a paid job?

- 1 Yes ➔ J3
- 2 No ➔ J4

_____ Non-response code

J3 What is your job?

Identify the most important activity. Both formal and informal types of employment are included here, as well as self-employment.

_____ Principal activity code
_____ Non-response code

Go to ➔ J6

J4 Have you ever worked either in a paid job, or in some form of unpaid work?

This question should only be asked if people are not working at the moment. Both formal and informal types of employment are included here, as well as self-employment. Unpaid work could include apprenticeships, internships, voluntary work or being an au pair.

- 1 Yes
- 2 No

_____ Non-response code

J5 At present, what do you do (for most of your time)?

Identify the most important activity. Unpaid work could include apprenticeships, internships, voluntary work or being an au pair.

_____ Principal activity code
_____ Non-response code

J6 Do you have any other activities?

*Apart from your main job and the most important activity do you have any other activities **at the moment**? Unpaid work could include apprenticeships, internships, voluntary work or being an au pair.*

- 1 Yes
— — — Activity code
— — — Activity code

- 2 No
— — — Non-response code

J7 What main sources of income all persons in your household have at the moment?

Both formal and informal types of income are included here, as well as self-employment. Types of income relate to all the people who are part of this household. Multiple answers possible.

- 1 Salary
2 Social Benefits
3 Remittances
4 Rent (from a property)
5 Pension
6 Agriculture
7 Business
8 Any other source of income
— — — Non-response code

J8 Sex

- 1 Man
2 Woman
— — — Non-response code

Expression of gratitude

These were all my questions. Thank you very much for your cooperation. ➔ K1

K. Questions for the interviewer

K1 Interview end time

____:____ hh:mm

K2 How would you assess the respondent's involvement during the interview?

- 1 Very conscientious, making an effort to provide good answers
- 2 Somewhat conscientious
- 3 Somewhat impatient
- 4 Very impatient, answering without much thought

K3 How would you assess the respondent's reaction to potentially sensitive questions?

- 1 Fully comfortable with all questions
- 2 Somewhat uncomfortable with certain questions
- 3 Uncomfortable with many questions

K4 Comments about the interview (optional, when there are important remarks to make)

Activity Codes - instructions

The activity starts with eight codes related to non-work activities. If the main activity is “work”, then ask for his/her occupation. Work as such is NOT to be coded (any code higher than 100 means ‘work’).

In this research, we understand ‘au pair’ as work (code 702)

The occupations are grouped in eight categories. In each category, several relevant occupations are listed. If you cannot find the relevant occupation, than code the last option in the relevant category (“other occupations” in this category). Interviewers should therefore try to understand in what occupational category the respondent’s main activity is to be placed. With some exceptions, the categories differ from each other because of the occupational level (required educational level). So we have:

- Higher-level professionals, managers, entrepreneurs (1)
- Associate professionals, lower management, and technicians (2)
- Routine clerical, sales and other non-manual workers (3)
- Manual foreman, supervisors (5)
- Skilled manual work, machine operators (not agriculture) (6)
- Semi-skilled and unskilled manual workers (not agriculture) (7)

Three occupational categories do not fit into this differentiation of occupational levels

- Small employers and independent workers (irrespective their educational level) (5)
- Agricultural workers (8)
- Informal survival strategies (all kinds of informal work arrangements) (9)

If the respondent’s occupation is not listed, than find out in what main occupational category s/he belongs in.

Note that farmers should be coded in category 4 (402 ‘self-employed farmer’) and not as agricultural worker (category 8).

Activity codes

- 001 follows language and/or integration course
- 002 In education (student/pupil)
- 003 Voluntary work
- 004 Not working, by choice (being a housewife, looking after children at home, etc)
- 005 Unemployed (would like to work and would accept work if it were available)
- 006 Retired (after reaching retirement age)
- 007 Unable to do work due to disability/illness
- 008 Imprisoned

If the respondent's main activity includes (paid) work, ask for his or her occupation.

Higher-level professionals, managers, entrepreneurs

- 101 Professional worker (architect, accountant, lawyer, doctor, dentist, pharmacist)
- 102 Politician, higher-level public official
- 103 Large department manager, large company owner (10+ subordinates)
- 104 Higher education teacher
- 105 Clergy (priest, imam)
- 106 Other higher grade professionals

Associate professionals, lower management, and technicians

- 201 Small department manager (10- subordinates)
- 202 Primary/secondary school teacher, language teacher
- 203 Translator/interpreter
- 204 Health assistant, nurse, midwives
- 205 Writers, creative professional (musician, photographer, etc.)
- 206 Administrative professional (bookkeeper, management assistant, etc.)
- 207 Army officer (higher rank)
- 208 Engineering technician
- 209 Computer programmer, software specialist
- 210 Other lower level professional, manager or technician

Routine clerical, sales and other non-manual workers

- 301 Office clerk (secretary, typist, etc.)
- 302 Sales clerk, shop assistant
- 303 Child care worker, health care assistant
- 304 Other routine non-manual worker

Small employers and independent workers

- 401 Small business owner (1-10 employees)
- 402 Own account worker (no employers)

- 403 Self-employed farmer/farm manager
- 404 Other small proprietor, artisan, etc

Manual foreman, supervisors

- 501 Foreman (in factory, mine or construction)
- 502 Supervisor of manual work
- 503 Other lower-grade supervisor

Skilled manual work, machine operators (not agriculture)

- 601 Skilled construction worker (painters, carpenter, plasterer, welder, etc.)
- 602 Fire-fighter, police officer, soldier
- 603 Hair dresser, beautician, etc.
- 604 Cook and other skilled work in catering industries
- 605 Other skilled manual workers

Semi-skilled and unskilled manual workers (not agriculture)

- 701 Domestic worker, maid
- 702 Au pair
- 703 Babysitter
- 704 Cleaner
- 705 Waiter, bartender and other unskilled work in hotels, clubs, etc.
- 706 Kitchen help, food courier, dishwasher
- 707 Private security (body guards, etc.)
- 708 Handicraft worker (carpet weaver, etc.)
- 709 Unskilled construction worker
- 710 Other semi-skilled and unskilled manual (not agriculture)

Agricultural workers

- 801 Farm worker (receives salary from farm owner)
- 802 Fishery, forest, mining worker
- 803 Gardener, horticultural worker
- 804 Other work in agriculture, horticulture, fishing, mining, etc.

Informal survival strategies

- 901 Working unpaid in family farm/business
- 902 Street vendor, hawker
- 903 Street musician
- 904 Other informal income generating strategies

Relation codes

The last digit is always 1 for male and 2 for female.

Relation codes 600 or higher refer to institutions.

Individuals

011	Husband (<i>or partner that respondent lives with</i>)
012	Wife (<i>or partner that respondent lives with</i>)
021	Father
022	Mother
031	Brother
032	Sister
041	Son
042	Daughter
051	Ex-husband
052	Ex-wife
111	Grandfather
112	Grandmother
121	Grandson
122	Granddaughter
131	Uncle
132	Aunt
141	Nephew
142	Niece
151	Male cousin
152	Female cousin
211	Brother-in-law
212	Sister-in-law
221	Son-in-law
222	Daughter-in-law
231	Father in-law
232	Mother-in-law
301	Other male relative
302	Other female relative
311	Boyfriend/fiancé
312	Girlfriend/fiancée
401	Male friend, colleague, classmate
402	Female friend, colleague, classmate
411	Male “friend of friend”*
412	Female “friend of friend”*

*) These codes refer to indirect personal relationships including “friends of relatives” and “relatives of

friends”. Examples might include “my boyfriend’s mother”, “the wife of my boss”, “my cousin’s neighbour”, etc.

421	Male neighbour
422	Female neighbour
431	Complete stranger (male)
432	Complete stranger (female)
501	Other male non-relative
502	Other female non-relative

Institutions that may offer support to (potential) migrants

601	Employers or businesses from [country of origin] in [country of destination]
602	Other employers and/or businesses in [country of destination]
603	Employers or businesses in [country of origin]
604	Lawyer (private and legal aid)
605	Employment/recruitment agencies
606	State agencies that recruit labour migrants
607	Agencies that recruit international students (and scholars) (e.g. universities)
608	Agencies that recruit au pairs / domestic labour
609	Agencies that mediate relationships with partners
610	Agencies that financially support international students
611	Migrant organizations or cultural organizations from [country of origin]
612	Religious institutions (churches, mosques, etc.)
613	Travel agencies
614	Translators (either individuals who are self-employed or organisations)
615	Embassy or consulate
616	Human smuggler/criminal organisation
617	Financial institutions and banks

Institutions that may offer information to (potential) migrants

701	Migrant media
702	Migrant community websites
703	General (incl. state) websites with information on [country of destination]
704	Embassy or consulate that provide information (not just visas)
