### Notes

<sup>i</sup> Data for foreigners inflows from 1972-1998 reflect issuance of new work permits. These are the only data available for Greece.

<sup>ii</sup> **Data for 1994 are reported with 2 different datasets: one contains the data we compiled of the various categories included such as workers and family members (see country notes); the other set contains the data reported by INED. You need to filter the data in order not to overcount the flows for 1994. To distinguish the two datasets filter by Collection method: in the calculated set, the data have Multiple Registers and Other Registration as the collection methods; the INED set has Residence Permit as Collection method.**

<sup>iii</sup> These data for citizens are reported separately because the source is different. These data were collected through emigration registers.

<sup>iv</sup> Gender disaggregation 1967-1984 is not available for all countries; no gender disaggregation in 1985.

<sup>v</sup> U.S. data include IRCA regularisation data in the 1989-1998 period.
